

## Ballina Shire Council

### Development Servicing Plan for Water Supply Infrastructure

Adopted by Council: 27 Feb 2015  
Registered by NSW Office of Water: 1 Jun 2015  
Fees implemented from: 1 Jul 2015

*GHD has prepared this Report on the basis of information provided by Ballina Shire Council, which GHD has not independently verified or checked (“Unverified Information”) beyond the agreed scope of work.*

*GHD expressly disclaims responsibility in connection with the Unverified Information, including (but not limited to) errors in, or omissions from, the Report, which were caused or contributed to by errors in, or omissions from, the Unverified Information.*

*GHD has prepared the preliminary cost estimates of this Report (“Cost Estimate”):*

- *using information reasonably available to the GHD employee(s) who prepared this Report; and*
- *based on assumptions and judgments made by GHD.*

*The Cost Estimate has been prepared for the purpose of Section 64 wastewater developer charges and must not be used for any other purpose.*

*The Cost Estimate is a preliminary estimate only. Actual prices, costs and other variables may be different to those used to prepare the Cost Estimate and may change. Unless as otherwise specified in this Report, no detailed quotation has been obtained for actions identified in this Report. GHD does not represent, warrant or guarantee that the works can or will be undertaken at a cost which is the same or less than the Cost Estimate.*

*Where estimates of potential costs are provided with an indicated level of confidence, notwithstanding the conservatism of the level of confidence selected as the planning level, there remains a chance that the cost will be greater than the planning estimate, and any funding would not be adequate. The confidence level considered to be most appropriate for planning purposes will vary depending on the conservatism of the user and the nature of the project. The user should therefore select appropriate confidence levels to suit their particular risk profile.*

# Executive Summary

This Development Servicing Plan (DSP) details drinking water developer charges relative to the development areas serviced by Ballina Shire Council (BSC).

This DSP has been prepared in accordance with the *Developer Charges Guidelines for Water Supply, Sewerage and Stormwater* (2002) issued by the Minister for Land and Water Conservation (now administered by the NSW Office of Water in the Department of Environment, Climate Change and Water (DECCW)), pursuant to section 306 (3) of the *Water Management Act 2000*.

The areas covered by this DSP are shown in Figure 1. The drinking water supply developer charges for the areas covered by this DSP have been calculated as detailed in Table 1. Background documents will be provided in electronic format upon request.

The total developer charge required in consequence of servicing a proposed development in the respective DSP areas will be assessed by multiplying the additional demand (ET) of the proposed development by the developer charge (\$/ET) in the table below. Loadings and credits will be assessed in accordance with the NSW Local Government Water Industry Directorate, *Section 64 Determinations of Equivalent Tenements Guidelines* (2005).

Ballina Shire Council anticipates that it will:

- ▶ Review this DSP once, and no more than once, in each five year period from the implementation of this plan, and
- ▶ Review Developer Charges when and to the extent required by the Department of Primary Industries, Office of Water (NOW).

In the period between any review, developer charges will be indexed annually (1st day of July) on the basis of movements on the CPI for Sydney, in the preceding 12 months to December, excluding the impact of GST. Current contribution rates are listed in Council's Annual Fees and Charges Document.

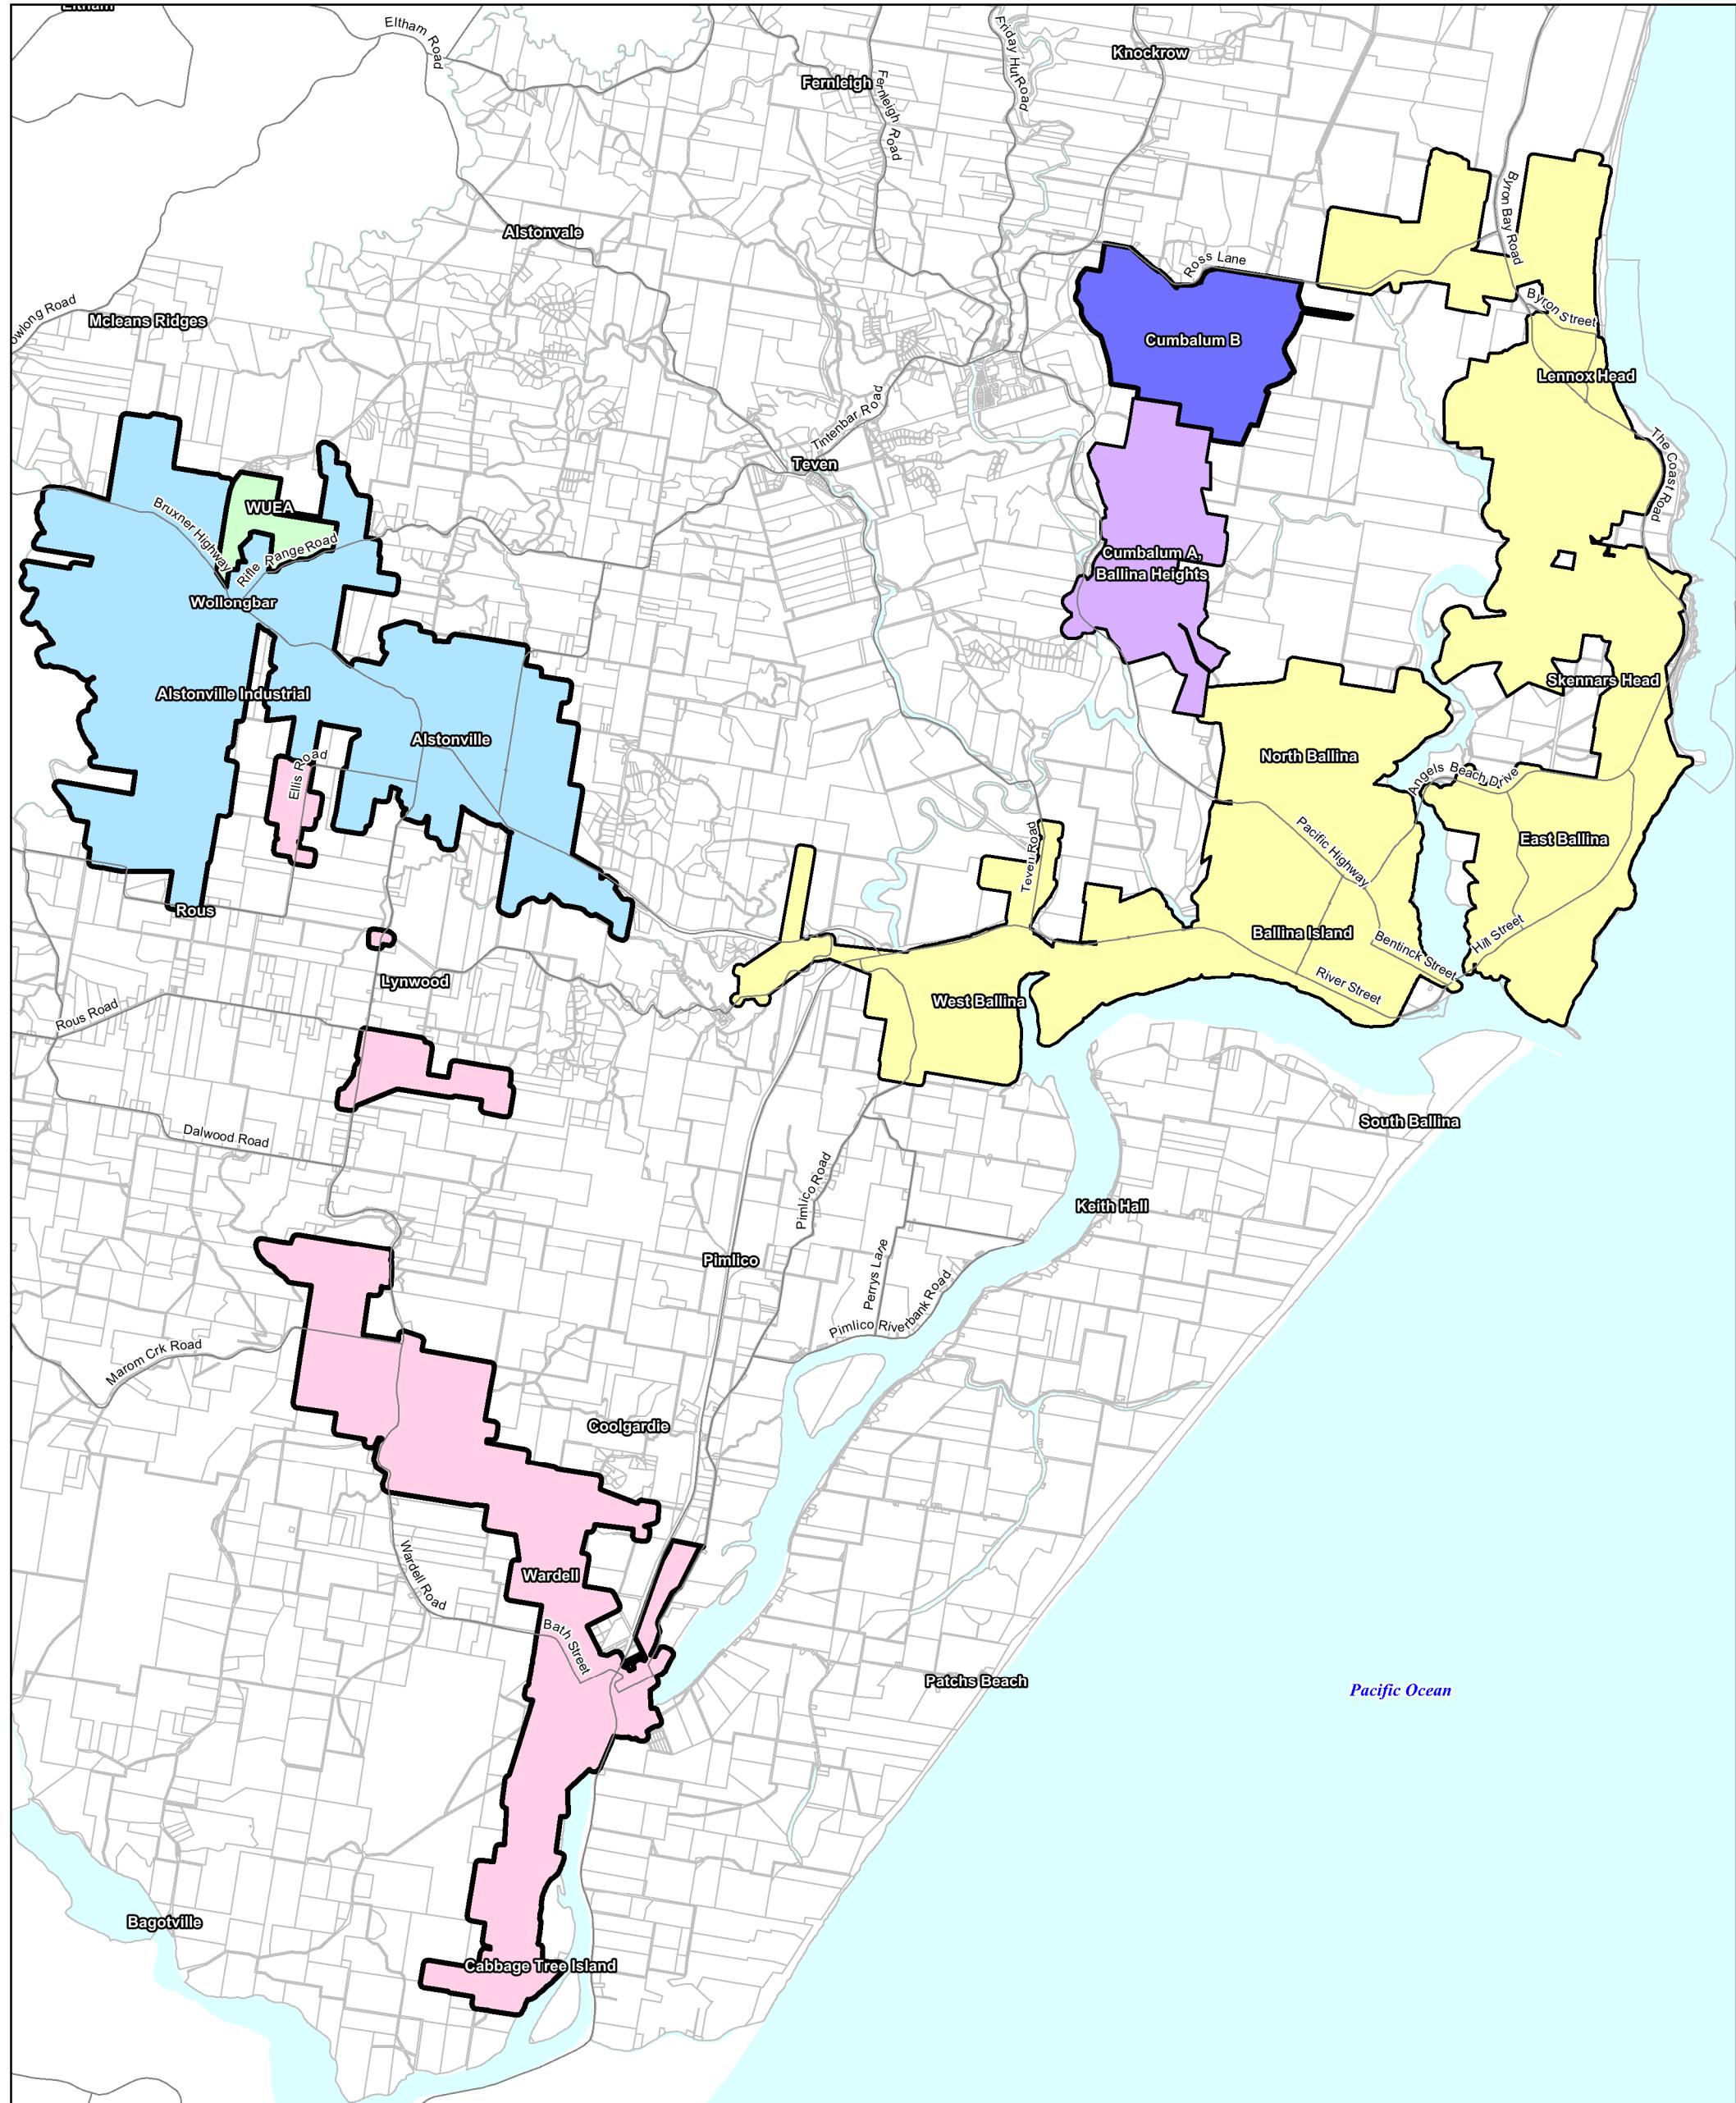

It should also be noted that these charges are exclusive of any developer charge that may be levied by Rous Water as a contribution towards bulk water infrastructure servicing the region. Current details of these charges may be obtained either from Rous Water, or from Council.

The Developer shall be responsible for the full cost of the design and construction of water supply reticulation works within subdivisions.

Relevant background documents are listed in Section 8 which identify the characteristics of the drinking water assets covered by this DSP. These documents are available on request from Council.

Ballina Shire Council  
Development Servicing Plan: Drinking Water Supply

Job Number 22-15470  
Revision 1  
Date 11 MAY 2012

#### DSP Areas Overview

Figure 1

# 1. Introduction

Section 64 of the *Local Government Act 1993* enables a local government council or water utility to levy developer charges for water supply, sewerage and stormwater. This derives from a cross-reference in that Act to section 306 of the *Water Management Act 2000*.

A Development Servicing Plan (DSP) is a document, which details the water supply developer charges to be levied on development areas requiring water supply infrastructure.

This report covers drinking water infrastructure for a number of development areas within the Ballina Shire.

This DSP has been prepared in accordance with the *Developer Charges Guidelines for Water Supply, Sewerage and Stormwater* (2002) issued by the Minister for Land and Water Conservation (now administered by the Department of Primary Industries Office of Water (NOW)), pursuant to section 306 (3) of the *Water Management Act 2000*. The guidelines require a review of DSPs to be conducted after a period of 5 to 6 years.

These DSPs supersede any other requirements related to water supply infrastructure developer charges for the area covered by these DSPs. These DSPs takes precedence over any of Council's codes or policies where there are any inconsistencies relating to water supply developer charges.

## 1.1 IPART Recommendations

IPART made a number of recommendations for amendments to the *Developer Charges Guidelines for Water Supply, Sewerage and Stormwater* (2002). Most of these recommendations have been adopted in this report with the following exceptions:

### Background Documents in Electronic Format

The background documents to the report were not set up to be suitable for public exhibition. It was therefore determined that for this DSP this recommendation (1.c) would not be adopted.

### Accredited Auditors

There are currently no accredited auditors and it is therefore not possible to adopt recommendation 3 at this time.

## **2. Administration**

### **2.1 Name of Development Servicing Plan**

This Development Servicing Plan (DSP) is known as *Ballina Shire Council Development Servicing Plan – Water Supply Infrastructure*.

### **2.2 Purpose of the Plan**

The aim and objectives of this DSP are to:

- ▶ Ensure that adequate drinking water infrastructure is provided for as part of new development, and in specified areas, recycled water infrastructure
- ▶ Provide a comprehensive strategy for the assessment, collection, expenditure accounting and review of contributions on an equitable basis;
- ▶ Ensure that the existing community is not burdened by the provision of water supply infrastructure as a result of future development; and
- ▶ Enable Council to be both publicly and financially accountable in its assessment and administration of the Development Servicing Plan.

### **2.3 Land to Which This Plan Applies**

This DSP applies to all land within the Ballina Shire Local Government Area that is within the existing and proposed service areas illustrated on Figure 1

### **2.4 Date of Commencement of Plan**

Council adopted this DSP on 26/2/15. The DSP came into effect upon recognition by NSW Office of Water.

The charges in this Plan will apply to all Development Applications determined on or after the date the Plan came into effect.

The charges in this Plan will also apply to existing development approvals that have developer charges outstanding.

### **2.5 How Will the DSP be Applied?**

In determining a Development Application, Council may impose a condition requiring payment of a monetary contribution in accordance with the provisions of this DSP.

The condition of development consent will outline the amount payable in monetary terms at the time the consent is issued. However, conditions of consent shall advise that the Developer Contributions will be at that rate which applies at the time of payment. Therefore the rate may increase from the time of issue of the development application through indexation or through the replacement or review of this DSP.

### **2.6 Reviewing/Updating of Calculated Developer Charges**

Ballina Shire Council anticipates that the developer charges relating to this DSP will be reviewed once and no more than once, in each five year period from the implementation of this plan.

In the period between any review, developer charges will be adjusted on 1 July each year on the basis of movements in the CPI for Sydney, in the preceding 12 months to December, excluding the impact of GST.

Developer charges will be those charges determined by Council from time-to-time and will be published in Council's Annual Fees and Charges.

## **2.7 Works within a Development**

The developer shall be responsible for the full cost of the design and construction of water supply reticulation works within subdivisions.

## **2.8 Developments Requiring Forward Funding**

Council will generally not support development applications, which require the provision of water infrastructure prior to the timeframes outlined within the Works schedule.

Council may however consider a Development Application that requires the provision of infrastructure prior to the planning phase subject to the Developer agreeing to forward fund the infrastructure at the Developer's own expense.

Council may in these instances enter into a written agreement to reimburse the Developer as Council receives developer charges from other developments reliant on that infrastructure in the area.

## **2.9 Payment for Developer Charges**

All developer charges will be paid at the rate applicable at the time of application for a Certificate of Compliance pursuant to Division 5 of Part 2 of Chapter 6 of the *Water Management Act 2000* is issued.

Generally payment of developer charges must be finalised at the following stages:

- ▶ Time of application for a Certificate of Compliance pursuant to Division 5 of Part 2 of Chapter 6 of the *Water Management Act 2000*.
- ▶ Development consents involving subdivisions – prior to release of linen plan;
- ▶ Development consents involving building work – prior to release of the construction certificate;
- ▶ Development consents where no construction certificate is required – at the time of issue of the notification of consent, or prior to the commencement of approved development as may be determined by Council. Examples may include Exempt or Complying Development under the State Environmental Planning Policy No. 60 – Exempt and Complying Development and approvals under Part 5 of the Environmental Planning and Assessment Act 1979.

## **2.10 Deferred Payment**

In general, developer contributions need to be paid as above. However, Council may decide to accept deferred or periodic payment in accordance with Council's Policy No. D10 *Deferral of Developer Contributions*. This document is subject to amendment and, as such, the latest version should be referred to. This can be obtained from Council's website.

## **2.11 Refunds**

Ballina Shire Council does not anticipate that developer charges will be refunded. In cases of extenuating circumstances, consideration will be given to a refund where developer charges have been paid in respect of a development consent that has lapsed and the funds have not been allocated/expended on the project identified in the DSP's work schedule.

Refunds will be a matter for Council to decide and it should be noted that any expended funds in the form of preliminary reports, investigations, land acquisitions etc. relating to the project could result in only part of the developer charges being refunded.

## **2.12 Works in Kind**

"Works in kind" involves the construction or provision of infrastructure that has been identified in a works schedule contained in the DSP in lieu of full or part payment of a contribution relating to that section of the plan.

The decision to accept "works in kind" contributions will be at the discretion of Council. Factors that Council will take into consideration include:

- ▶ The extent to which the "works in kind" satisfies an item identified on the works program;
- ▶ Whether the payment of the contribution in accordance with the provisions of the DSP is unreasonable or unnecessary in the circumstances of the case;
- ▶ Whether the "works in kind" contribution will prejudice the timing or manner of the provision of the services for which the contribution is required; and
- ▶ The value of the "works in kind".

## **2.13 Developments outside the Development Servicing Areas**

Development areas outside the DSP Area (refer to relevant drawing/s in Section 11) that are to be developed during the term of this policy and have no detailed DSP (and require water supply services), will be subjected to a separate DSP. The Developer shall be responsible for the preparation cost of this DSP.

## **2.14 Consultation and Dispute Resolution**

A Developer who is dissatisfied with how a water supply utility has calculated a developer charge has a right of appeal pursuant to the DLWC *Guidelines for Calculating Developer Charges of Water Supply, Sewerage, and Stormwater* (2002).

1. A Developer who is dissatisfied with the way in which a water utility has calculated a developer charge may complain to the utility.
2. The General Manager of the utility is to review the complaint or cause it to be reviewed.
3. The Developer, if still dissatisfied, may request that an arbitrator review the matter by way of arbitration. The arbitrator is to be appointed by agreement between the Developer and the water utility.
4. The decision of the arbitrator is to be binding on both the Developer and the utility.

5. Costs of the arbitration are to be borne equally by the utility and the customer.
6. The Commercial Arbitration Act 1984 applies to any such arbitration.

It should be noted that not all aspects of the developer charge calculation are arbitral. That is, those matters of detail which are prescribed in DLWC's Guidelines are not subject to arbitration. For example, discount rates and the forecast horizon for expected net revenues and costs are parameters that are prescribed by DLWC.

## 3. Demographic and Land Use Planning Information

### 3.1 Growth Projections

Growth projections for population and number of ETs are shown in Table 2 below. These projections are for a 20-year planning horizon from the present year to 2030, which is Council's current planning horizon.

**Table 2 Projected Equivalent Tenement Growth<sup>1</sup>**

| Time Period | Projected Shire ET Growth | Total Serviced ETs | Total Shire Population |
|-------------|---------------------------|--------------------|------------------------|
| 2010        | -                         | 20,633             | 42,546                 |
| 2010 – 2015 | 3,739                     | 24,372             | 45,356                 |
| 2015 – 2020 | 2,721                     | 27,093             | 48,116                 |
| 2020 – 2025 | 2,426                     | 29,519             | 50,786                 |
| 2025 – 2030 | 2,171                     | 31,690             | 53,276                 |

Projected ET growth for the areas covered by individual DSPs are provided in Appendix A as part of the calculations of the capital charge.

### 3.2 Land Use Information

This DSP should be read in conjunction with Ballina Shire Council Urban Land Release Strategy (2000), the Ballina Shire Council Local Environmental Plan (1987) (BLEP) and the Draft Ballina Local Environmental Plan (2010).

### 3.3 Projected Equivalent Tenements

The basis of future development throughout the Ballina Shire has been adopted from information provided by the BSC Strategic and Community Services Group. This included the Ballina Shire Council Local Growth Management Strategy - Housing demand and supply analysis working documents. The information in these documents is derived from information supplied by the Australian Bureau of Statistics, incorporating the latest available population information.

The projected future development areas and dwelling increases across the Shire, based on:

- ▶ Areas assumed for future land release;
- ▶ Areas identified as part of the BSC Growth Management Strategy; and
- ▶ Potential for Infill Development.

Actual population growth will be subject to the rezoning process and Council Development Approval.

<sup>1</sup> Source: Ballina Shire Council Local Growth Management Strategy – Housing demand and supply analysis working documents.

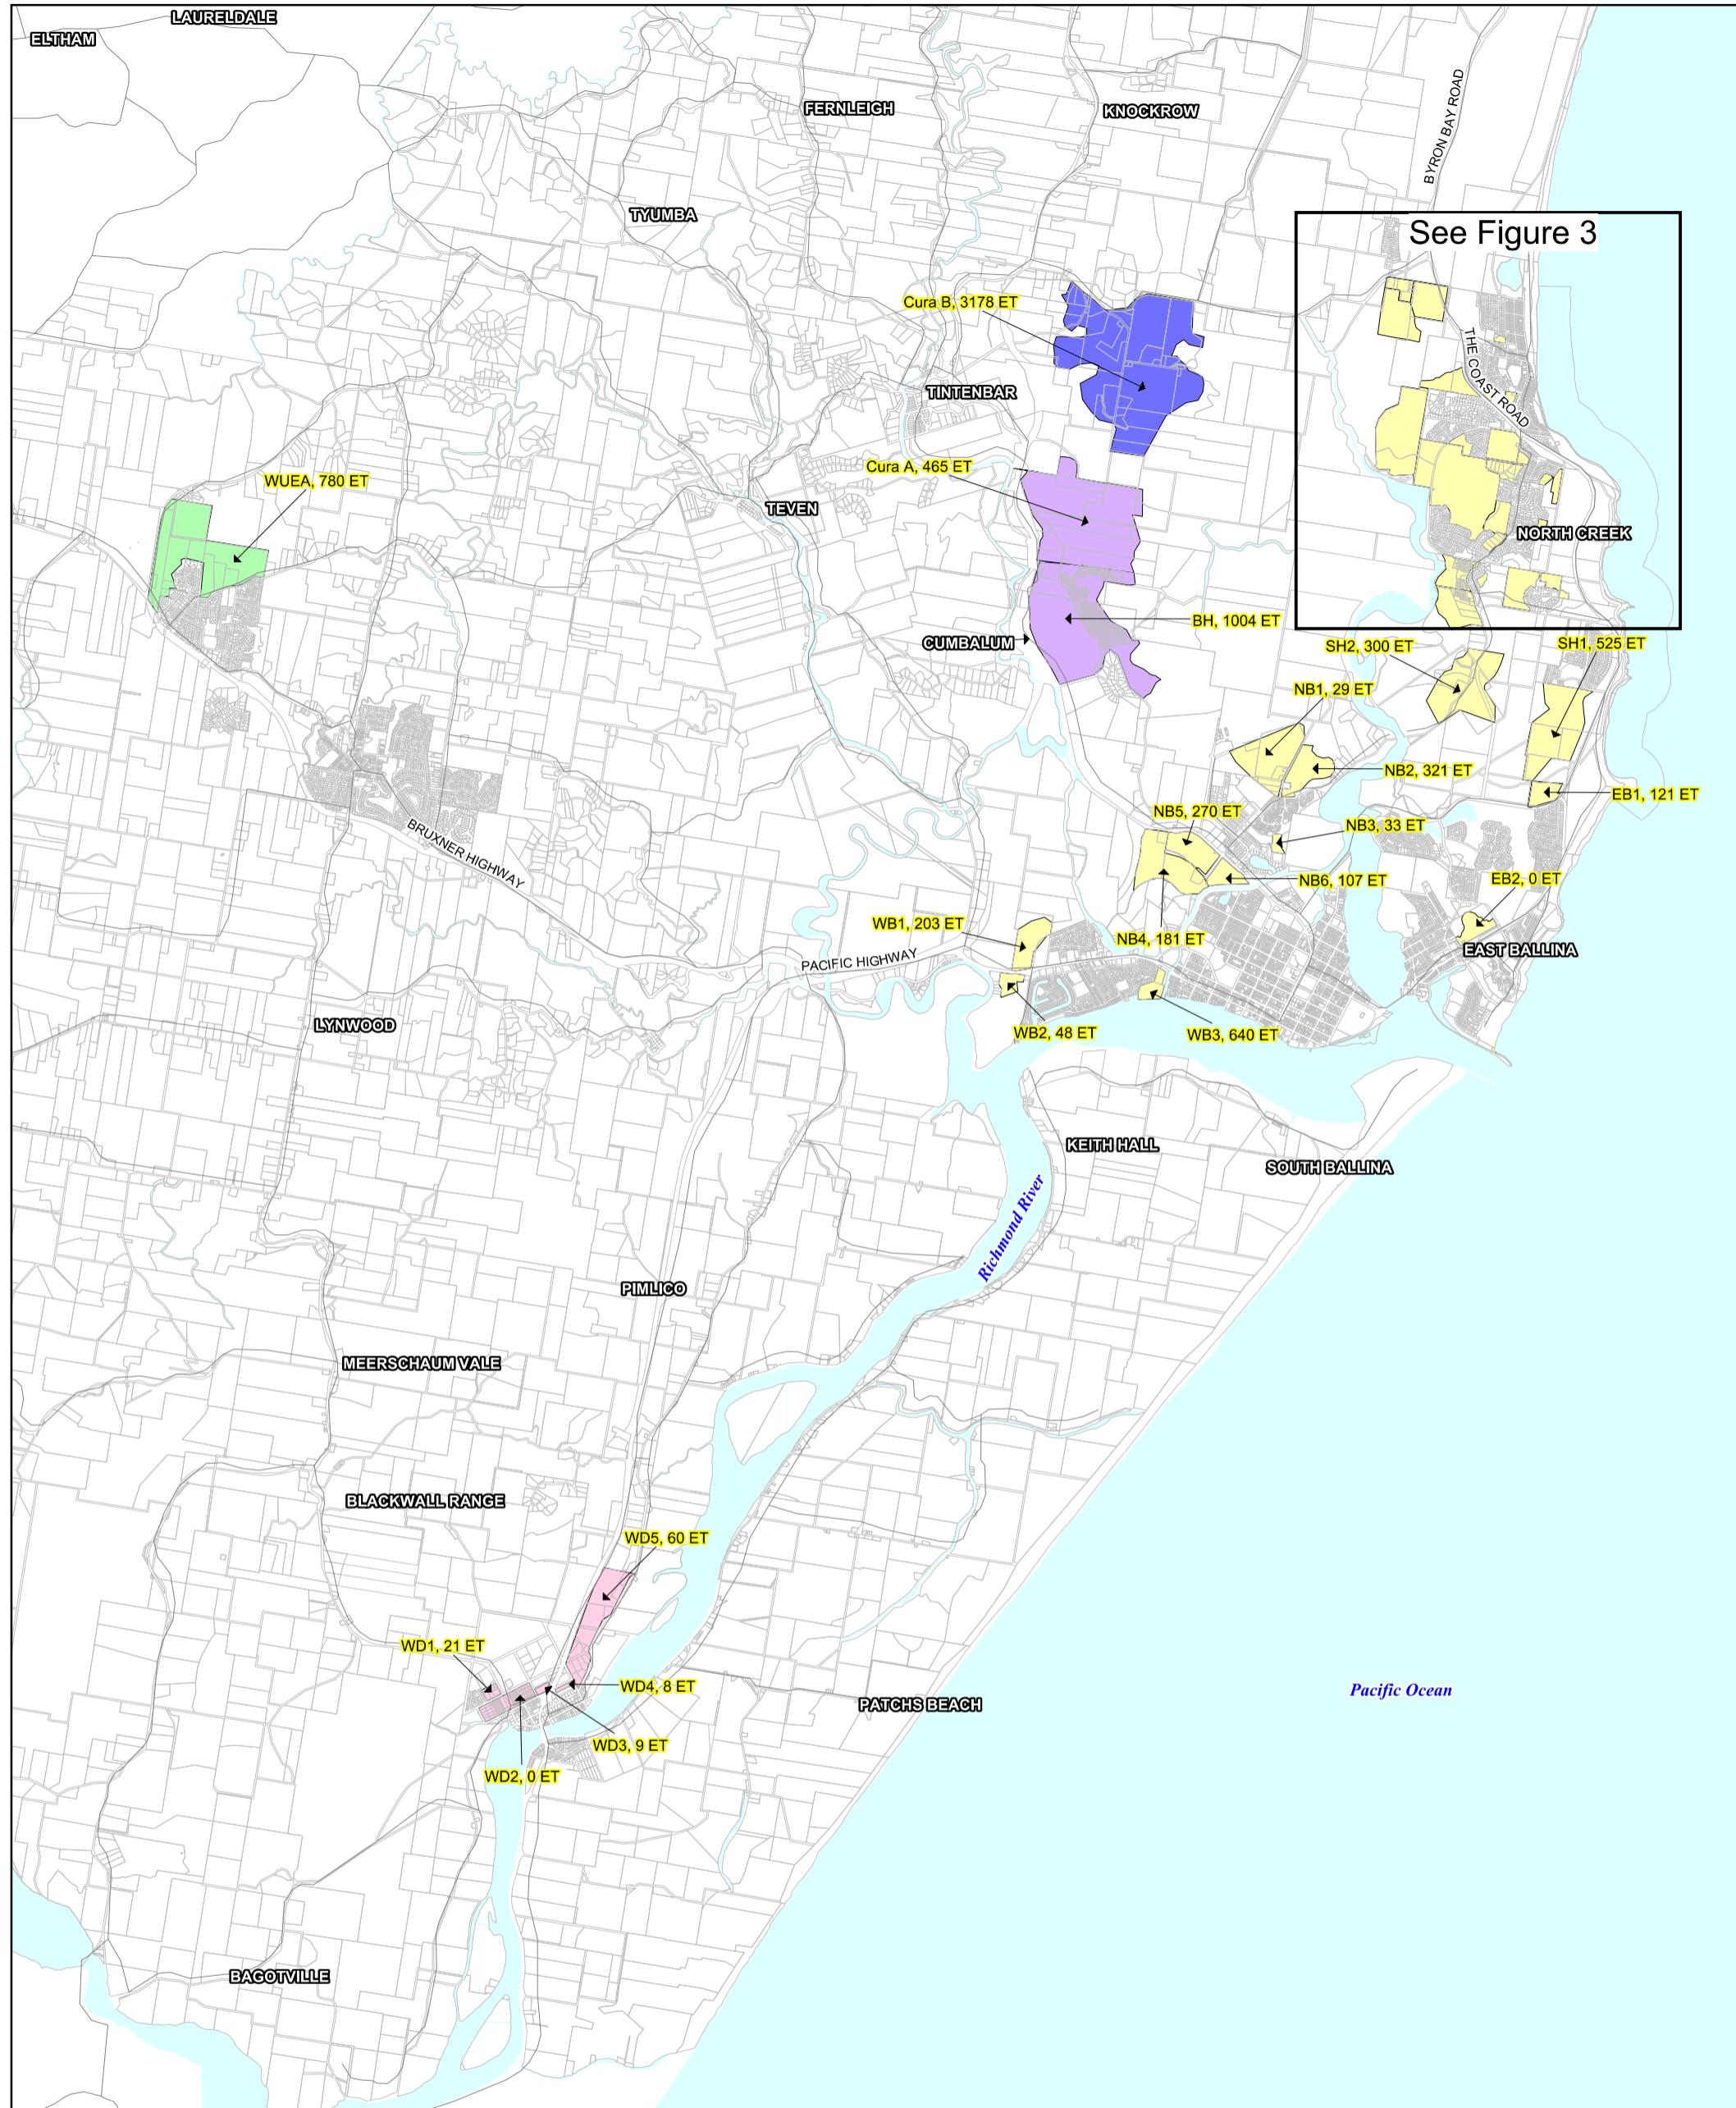

### **3.3.1 Future Development Areas**

A number of key development areas, identified for future land supply in Ballina Shire, have been included in this plan for the purposes of determining infrastructure capacity and works within the plan. These areas, and their projected sizes, are shown in Figure 2 and Figure 3.

### **3.3.2 Development Summary**

In addition, future development and infill growth has also been identified through all the Development Servicing Areas.

The location of the proposed development areas are shown on Figure 1.

#### Key Development Areas - Insert Map

Figure 3

## 4. Drinking Water Infrastructure

This plan levies developer charges towards the cost of providing water supply infrastructure to service new development. This infrastructure includes the value of both existing and future assets serving a new development area.

Works covered by this DSP include, but are not limited to:

- ▶ Distribution and Trunk Mains;
- ▶ Water Pumping Stations;
- ▶ Water Treatment Works;
- ▶ Water Reservoirs;

The existing and proposed trunk infrastructure serving the area covered by this DSP is shown in a spatial format in Section 11.

### 4.1 Estimates of Capital Cost

The estimated capital cost of works serving the area covered by this DSP are provided in Appendix C.

The capital costs for trunk mains were estimated using the *NSW Office of Water (formerly Ministry of Energy and Utilities), NSW Reference Rates Manual – Valuation of Water Supply, Sewerage and Stormwater Assets (2003 with 2010 update)* (the Manual). More information on these rates, including excluded items can be found in the Manual.

The pump station, treatment plant and reservoir costs were estimated using the GHD Cost Database as it was felt that these costs were more appropriate to valuing new works than those provided in the Manual. These rates include a 30% contingency.

All assets that will be greater than 30 years of age when the DSP comes into effect have been excluded from the DSP calculations. This is in accordance with IPART recommendations, as BSC were unable to provide documentation justifying that population growth was accounted for in the development of these assets.

### 4.2 Timing of Works

The estimated timing for works serving the area covered by this DSP are provided in Appendix C. Further information regarding how the timings were estimated for individual work items is provided in report Reference 4. Dates identified are approximate only and are contingent on development proceeding.

## 5. Standards of Service

System design and operation are based on providing the following standards of service.

### 5.1 Desired Standards of Service

#### Pressures:

Where significant capital investment is required to satisfy marginal pressure requirements for a small number of connections an absolute minimum of 12 m head for residential and non-residential customers will apply.

- ▶ For residential customers, a minimum residual pressure of 20 m (196 kPa) at the property boundary at Peak Instantaneous Demand (PID).
- ▶ For non-residential customers, a minimum residual pressure of 25m (245 kPa) at the property boundary under Peak Instantaneous Demand (PID).
- ▶ Minimum Residual Pressure (Recycled Water) 15 m head, while storages are 1/3 full.
- ▶ A maximum residual pressure of 80 m (785 kPa) head at the property boundary during MID (Reference 4).
- ▶ Residual pressure of 150 kPa at the node (hydrant) during fire flow conditions, service reservoirs 1/3 full or the level that meets dot point two above, whichever is higher (Reference 4). (Pumped systems are assumed off due to the risk of failure of electrical supply, demand management areas are assumed to have the valve set point at the lowest level capable of meeting the criteria).
- ▶ Positive head elsewhere in the network during fire flow conditions.
- ▶ For Ballina, minimum pressures are to be maintained for the possible situations where a trunk main break occurs, or pipe maintenance is required.

#### Supply Strategy:

- ▶ Service reservoir storage equal to one Peak Day Demand (PDD)
- ▶ Supply into service reservoirs (Trunk mains) capable of delivering PDD over 24 hours (for gravity mains) and PDD over 22 hours (for rising mains)
- ▶ Minimum Storage in a reservoir = 4 hours fire fighting requirements + 4/24 PDD or 1/3 full, whichever is greater
- ▶ Drinking water top up for recycled water available for Urban Dual Reticulation connections in the case of recycled water treatment or transport failure.

#### Water Quality:

- ▶ To comply with Council's Drinking Water Quality Policy, the Public Health Act (2010), the Australian Drinking Water Guidelines and the NSW Best Practice Management Guidelines.

#### Interruption of Service:

- ▶ Nil unplanned interruptions greater than 6 hours; and
- ▶ Nil programmed interruptions greater than 12 hours.

**Water restrictions:**

- ▶ Water restrictions applying for not greater than 10% of the time on average

## 6. Design Parameters

Investigation and design of drinking water supply system components is generally based on the Water Supply Investigation Manual (1986). This Manual was prepared by the former NSW Public Works Department. In order to determine the infrastructure requirements over the planning horizon, the trunk water supply network was modelled by Council using H2OMap Water software by Innovyz, to determine the performance of the existing and proposed systems under projected hydraulic loads.

The Ballina Shire Council – Report for Water Supply Infrastructure Planning Version 1– (BSC, 2011) relates to the system components in this DSP. The planning and design parameters adopted in this report are discussed in the following section.

### 6.1 Planning and Design Parameters

The major components of the water supply network were planned according to the following:

**Rising and Gravitation Mains:** Are sized to deliver Peak Day Demand (PDD) over 22 hours and 24 hours respectively, with the diameter of a rising main sized to give the least present worth of capital and pumping costs. Gravity mains are sized by consideration of available head and grade.

**Reticulation:** Reticulation is to give minimum pressures, as outlined above, with the active storage of the service reservoir(s) 2/3 depleted during periods of maximum demand.

Table 3 provides the Hazen-Williams ‘C’ friction factor values that were adopted.

**Table 3 Adopted friction factors**

| Nominal Diameter          | Hazen-Williams ‘C’ Value |
|---------------------------|--------------------------|
| 150 mm or less            | 100                      |
| 200 mm – 250 mm inclusive | 110                      |
| 300 mm or greater         | 120                      |

# 7. Calculated Developer Charges

## 7.1 Background

Developer charges are comprised of the following components:

- ▶ Capital charge – the cost of providing the asset, and;
- ▶ Reduction amount – the cost recovered through annual charges.

The relationship between these components is as follows:

$$\text{Developer Charge} = \text{Capital Charge} - \text{Reduction Amount}$$

## 7.2 Service Areas

Developer charges were initially calculated for a number of different service areas within the Ballina Shire Local Government Area.

Service areas were determined by Council.

This resulted in the adoption of the service areas detailed in Table 4 below.

**Table 4 Service Areas**

| Service Areas | Localities Included  |
|---------------|--|
| Area A        | Wardell  |
| Area B        | Lennox Head<br>Skennars Head<br>East Ballina<br>Fig Tree Hill<br>North Ballina<br>West Ballina<br>Ballina Island<br>Pacific Pines Estate<br>Henderson Land Central and South |
| Area C        | Release area known as the Wollongbar Urban Expansion Area (WUEA)   |
| Area E        | Alstonville and Wollongbar   |
| Area F        | Existing and future development in Cumbalum Precinct A<br>Existing and future development in Ballina Heights   |
| Area G        | Future development in Cumbalum Precinct B  |

### **7.3 Capital Charge**

The capital charge of an asset is calculated using the following steps, as described in the Guidelines (DLWC, 2002):

- ▶ *Estimate the period to full take-up of asset capacity, commencing in or after 1996. If information is readily available, actual take-up rates to date should be used. If not, the water utility could use an average based on the take-up rate for similar release or development areas, or other (better) estimates that are available. An estimate of the take-up of existing unused capacity should also be made.*
- ▶ *Calculate the capital charge per ET necessary to equate the present value of the stream of charges which would be derived from annual (per ET) charges and the capital cost of the asset.*

There are two basic approaches to calculating the capital charge per ET, the return on investment (ROI) approach and the spreadsheet approach. The latter is more appropriate for development areas where infrastructure will be developed in stages, and therefore was adopted for this DSP.

The capital charge calculations are contained in Appendix C.

### **7.4 Reduction Amount**

Council has adopted the Direct NPV method to calculate the Reduction Amount, as per the 2012 Draft Guidelines (DPI, 2012). Note that this is a different and simpler method of calculation from the NPV method proposed by the 2002 Guidelines. As per the 2012 Draft Guidelines:

*This method involves calculation of the present value (PV) of the future net income, which is the difference between the revenue from annual bills, and annual OMA cost, projected for new development over the next 30 years. This is divided by the PV of the new ETs over 30 years to give the reduction amount.*

The reduction amount calculations for water are contained in Appendix A. The Reduction Amount was calculated using the 2011/2012 OMA costs and annual billing data, as per the basis year for the rest of the calculations. Note that in calculating the average bill per ET, the rate of water consumption was lowered from 230 kL/ET/annum to 155 kL/ET/annum, based on the lower rate of potable water consumption expected to occur in the future due to increased coverage of dual reticulation.

The calculated reduction amount was \$385 per ET. Details of the reduction amount calculation are located in Appendix C.

### **7.5 Methodology for Determining Developer Charges to be Paid**

Calculation of the developer charge payable on all developments is based on the following formula:

$$\text{Development Charge Payable} = \text{Developer Charge}^2 (\$/\text{ET}) \times \text{ETs}$$

When a development is assessed by Council, the only variable in this calculation is therefore the number of ETs in the proposed development. The following sections define how the number of ETs are defined for specific development types.

---

<sup>2</sup> Developer charge as defined by this document.

It should be noted that when a development is assessed, and the assessed ETs for the same falls below or is equal to the current entitlements, no developer charges will be levied, nor monies refunded on unused entitlements.

A developer charge will only be levied against a development where the ET evaluation is above the current entitlement.

#### **7.5.1 Existing Unconnected Lots**

In the case of an existing lot to be connected to Council's system and which has not previously paid developer charges, a contribution equivalent to the relevant developer charges will be applied.

#### **7.5.2 Residential Development**

Developer contributions for residential developments are based on industry guidelines that define the number of ETs for common development types. At the time of publishing this policy, the Water Directorate (May 2009 Addendum), *Section 64 Determinations of Equivalent Tenements Guidelines* are the current industry guidelines.

For advice on the current industry guidelines being used to calculate residential developer charges, please contact Ballina Shire Council's Water and Wastewater Section.

#### **7.5.3 Non-Residential Developments including Commercial/Industrial Developments**

Developer contributions for non-residential developments are based on industry guidelines that define the number of ETs for common development types, such as commercial and industrial uses.

At the time of publishing this policy, the Water Directorate *Section 64 Determinations of Equivalent Tenements Guidelines* are the current industry guidelines.

For advice on the current industry guidelines being used to calculate non-residential developer charges, please contact Ballina Shire Council's Water and Wastewater Section.

If the industry guidelines do not provide an appropriate match to the development being assessed, then the developer contribution will be determined via the use of one of the following methods:

1. Based on historical water consumption figures of similar developments (see Section 7.5.4); or
2. The number of water / wastewater fixture units (FU's – see Section 7.5.5); or
3. Information supplied by the Developer for water consumption (see Section 7.5.6).

#### **7.5.4 Historical Water Consumption Method**

This is applicable where historical water consumption information is available.

The ET loading will be determined by assessing the historical water consumption of similar developments (i.e.: 1 ET = 230 kL/annum of water consumption (Water Directorate, May 2009 Addendum)).

#### **7.5.5 Fixture Unit (FU) Method**

The fixture unit method will be used in cases where the above-mentioned methods are not appropriate.

The fixture units are calculated using the table from Section 6.2 of Part 2.2 of the National Plumbing and Drainage Code – AS3500. This number is then converted to an equivalent tenement using the probable simultaneous flow rate for a standard house.

#### **7.5.6 Information Supplied by the Developer**

This will normally be applicable for developments that cannot be determined by historical water consumption (such as a heavy industrial development) or where the developer proposes to utilise water saving devices that will reduce the consumption of water compared with similar developments.

For the calculation of ET's based on this method, the developer will need to supply to Council a submission outlining the proposed flow rates (instantaneous, daily and average annual flow rates) together with relevant supporting documentation.

#### **7.5.7 Developer Charges**

The developer charges determined prior to any agglomeration or cross-subsidy are shown in Table 5. The charges calculated were updated to 2011/12 rates by applying the CPI rate from the cost basis year to 2011/12 for Sydney (as per updating method in the Guidelines).

**Table 5 Capital Charge per Development Area prior to Reduction & Agglomeration**

| Development Area | Total Capital Charge per ET (\$) | Total ET Growth (ET) | Proportion of Growth (%) | Weighted Capital (\$) | Reduction amount (\$) | Developer charge (prior to agglomeration) (\$) |
|------------------|----------------------------------|----------------------|--------------------------|-----------------------|-----------------------|--|
| A                | 11,487                           | 109                  | 1.0%                     | 113                   | 385                   | 11,102   |
| B                | 3,270                            | 5,319                | 48.1%                    | 1,573                 | 385                   | 2,885  |
| C                | 2,225                            | 722                  | 6.5%                     | 145                   | 385                   | 1,840  |
| E                | 1,106                            | 1,782                | 16.1%                    | 178                   | 385                   | 721  |
| F                | 3,177                            | 186                  | 1.7%                     | 54                    | 385                   | 2,792  |
| G                | 849                              | 2,939                | 26.6%                    | 226                   | 385                   | 463  |

#### **7.6 Cross-Subsidy**

The Guidelines (DLWC, 2002) permit Local Government Authorities to cross-subsidise the calculated developer charge for an area, provided the extent of cross-subsidisation is fully disclosed. It is also noted that a developer charge cannot be cross-subsidised from one area to another. Instead, a developer charge for a particular area can be cross-subsidised via a corresponding change in the annual charge being paid through water rates.

Note that no cross-subsidy has been included in this report. Cross-subsidy calculations will be performed following discussions with Ballina Shire Council.

## **7.7 Agglomeration of Service Areas**

Once the capital charges have been calculated for each service area, the Guidelines (DLWC, 2002) permit the agglomeration of charges that are within 30% of each other. Agglomeration is intended to minimise the number of different developer charges within the local government area. The agglomeration methodology outlined in the Guidelines (DLWC, 2002) was used to determine the adopted developer charge. The agglomerated charges are shown in Table 6.

For Wardell (DSP Area A), agglomeration is not permitted since it is outside 30% of the next highest calculated developer charge and therefore cannot be aggregated with other DSP areas.

**Table 6 Adopted Developer Charges after Agglomeration (2011/12 rates)**

| Area                        | Development Area  | Total Capital Charge per ET (\$/ET) | Agglomeration inspection (70% of \$/ET) | Total ET Growth (ET) | Proportion of Growth | Weighted Capital Charge for Each Location (\$/ET) | Capital Charge for each DSP Area (\$/ET) | Reduction amount (\$/ET) | Calculated & Adopted Developer Charge (\$/ET) | Utility Wide Weighted Average Developer Charge per ET (\$/ET) |
|-----------------------------|---|-------------------------------------|---|----------------------|----------------------|---|--|--------------------------|---|---|
| A                           | Wardell   | 11,487                              | 8,041                                   | 109                  | 1.0%                 | 113   |  |                          |   |   |
| <b>Total for Area A</b>     |   |                                     |   |                      | <b>1.0%</b>          | <b>113</b>  | <b>11,487</b>                            | <b>385</b>               | <b>11,102</b>                                 |   |
| B                           | North/East/West Ballina, Ballina Island, Skennars Head, Lennox Head | 3,270                               | 2,289                                   | 5319                 | 48.1%                | 1,573   |  |                          |   |   |
| E                           | Alstonville, Wollongbar   | 3,177                               |   | 186                  | 1.7%                 | 54  |  |                          |   |   |
| <b>Total for areas B, E</b> |   |                                     |   |                      | <b>49.8%</b>         | <b>1,627</b>                                      | <b>3,267</b>                             | <b>385</b>               | <b>2,882</b>                                  |   |
| C                           | WUEA  | 2,225                               | 1,557                                   | 722                  | 6.5%                 | 145   |  |                          |   |   |

## 8. Reference Documents

Background information and calculations relating to this DSP are contained in the following documents:

1. Department of Land and Water Conservation (2002), *Developer Charges Guidelines for Water Supply, Sewerage and Stormwater*.
2. Department of Primary Industries (2012), *Developer Charges Guidelines for Water Supply, Sewerage and Stormwater, 2012 – Consultation Draft*
3. New South Wales Government Office of Water, Ministry of Energy and Utilities (2003 with amendments in 2010), *NSW Reference Rates Manual – Valuation of Water Supply, Sewerage and Stormwater Assets*.
4. BSC (October 2011), *Ballina Shire Council – Water Supply Infrastructure Planning Report*.
5. Water Directorate (May 2009 Addendum), *Section 64 Determinations of Equivalent Tenements Guidelines*.

These documents contain more detailed reference information relevant to the derivation of the developer charges. These documents can be reviewed in Council's offices by appointment. To review the documents, please contact Council on (02) 6686 4444.

## 9. Other DSP's and Related Plans

Other DSP's and related plans include:

- ▶ GHD (2011), *Ballina Shire Council – Wastewater Infrastructure – Development Servicing Plan*
- ▶ Rous Water (2009), *Rous Water Development Servicing Plans – Regional Water Supply*.

Ballina Shire Council also levies developer contributions for various public amenities under Section 94 of the *Environmental Planning and Assessment Act, 1979*.

## 10. Glossary

|                       |  |
|-----------------------|--|
| Annual Demand         | Total annual WATER loading   |
| BSC                   | Ballina Shire Council  |
| Capital Cost          | The Present Value (MEERA basis) of assets used to service the development.   |
| Capital Charge        | Capital cost of assets per ET x Return on Investment (ROI) Factor.   |
| CPI                   | Consumer Price Index   |
| Developer Charge (DC) | A charge levied on Developers to recover part of the capital cost incurred in providing infrastructure to new development. |
| Discount Rate         | The rate used to calculate the present value of money arising in the future.   |

| MEERA                 | Modern Equivalent Engineering Replacement Asset  |
| MID                   | Minimum Instantaneous Demand (Night Time Flow)   |
| ML/d                  | Megalitres per day   |
| NHMRC                 | National Health and Medical Research Council   |
| NPV                   | Net Present Value  |
| OMA                   | Operation, maintenance and administration (costs)  |
| PDD                   | Peak Day Demand. Highest water consumption on one day in a year  |
| PID                   | Peak Instantaneous Demand  |

|                  |   |
|------------------|---|
| Post 1996 Asset  | An Asset that was commissioned by a water utility on or after 1 January 1996 or that is yet to be commissioned  |
| Pre-1996 Asset   | An Asset that was commissioned by a water utility before 1 January 1996   |
| PRV              | Pressure Relief Valve   |
| PMZ              | Pressure Management Zone. A reticulation area where the pressures are managed via a PRV   |
| PV               | Present value. The value now of money, or ETs, in the future.   |
| Real Terms       | The value of a variable adjusted for inflation by a CPI adjustment  |
| Reduction Amount | The amount by which the capital charge is reduced to arrive at the developer charge. This amount reflects the present value of the capital contribution that will be paid by the occupier of a development as part of future annual charges |
| ROI              | Return on investment. Represents the income that is, or could be, generated by investing money  |
| PS               | Pumping Station   |
| WR               | Water Service Reservoir   |
| RWP              | Recycled Water Treatment Plant  |
| RWR              | Recycled Water Reservoir  |
| RWT              | Recycled Water Tank   |
| Service Area     | An area served by a separate water supply system, an area served by a separate sewage treatment works, a separate small town or village, or a new development of over 500 lots.   |
| SR               | Service Reservoir   |
| TRB              | Typical residential bill  |
| WTP              | Water Treatment Plant   |

## 11. DSP Areas

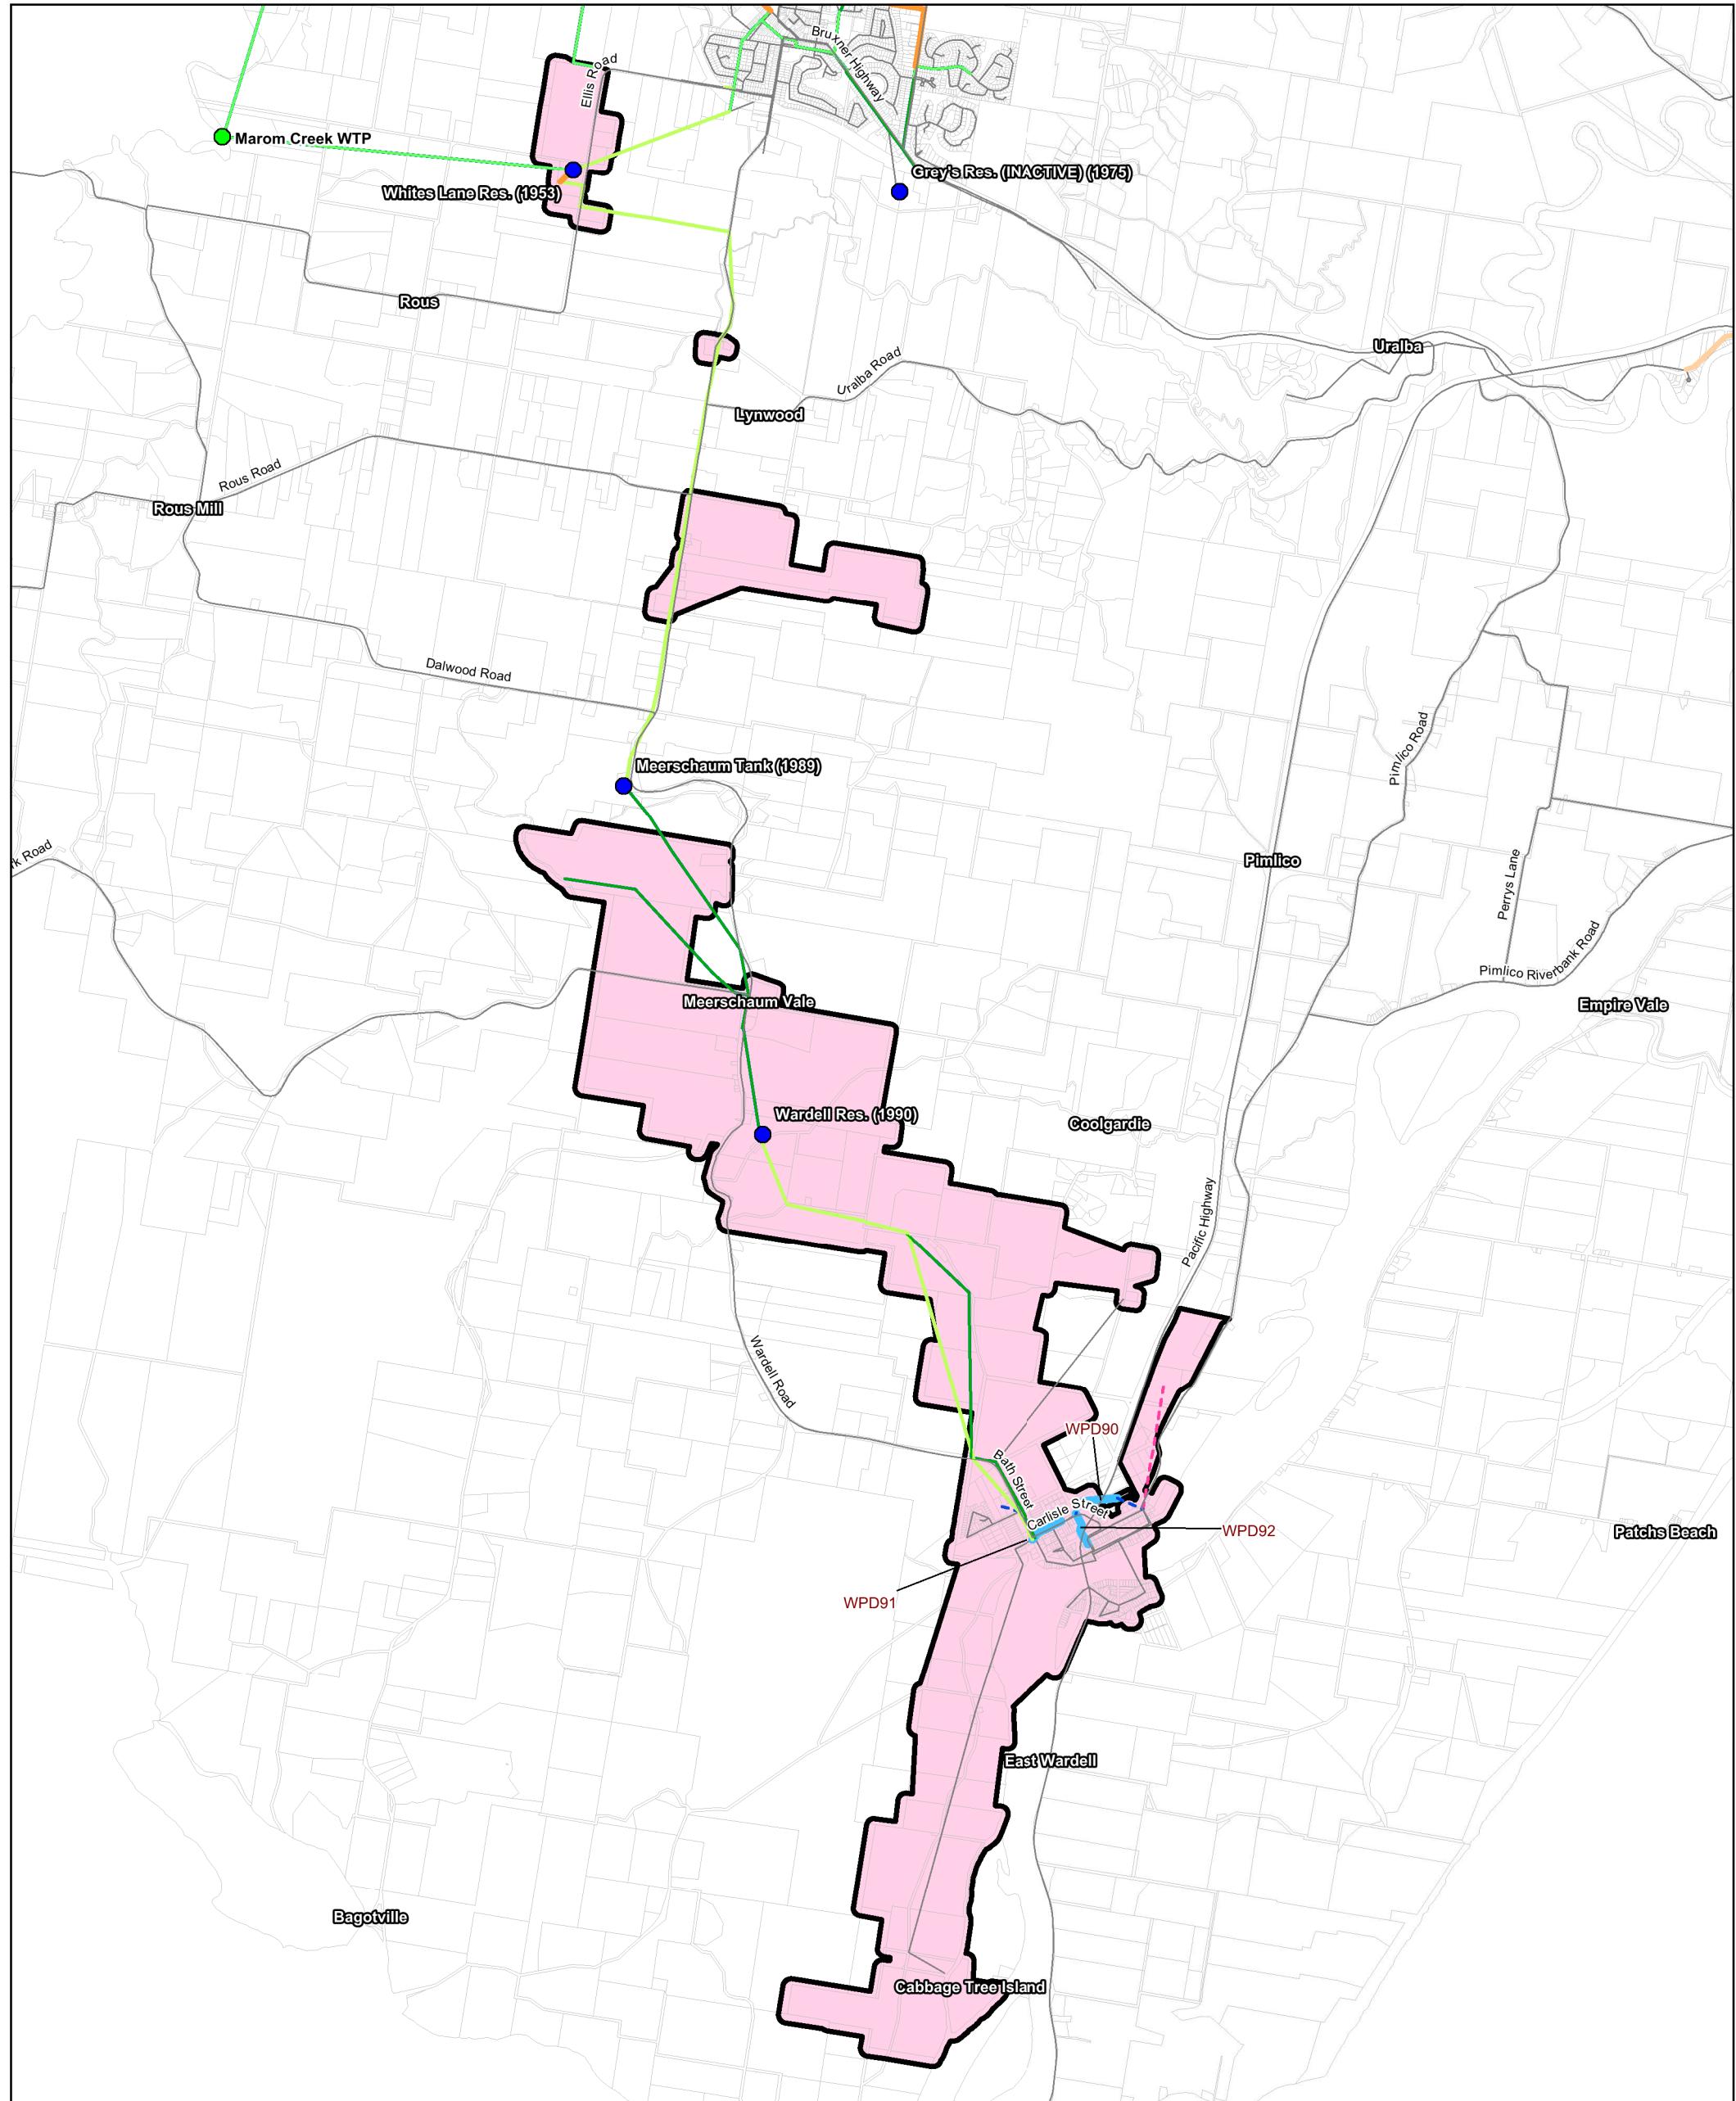

Table 7 provides an index to the figures defining the DSP areas provided in this section. Each figure (excluding Figure 1) indicates:

- ▶ The boundaries to the DSP area<sup>33</sup>;
- ▶ The extent of existing trunk infrastructure;
- ▶ The location of recycled water serviced areas

**Table 7      Summary of DSP Area Maps for Drinking Water Infrastructure**

| <b>Figure Number</b> | <b>Locality</b>                              | <b>DSP Area</b>    |
|----------------------|--|--------------------|

**Capital Charge: Reservoirs - Future and Existing**

Basis of "Existing" = commissioning year up to 2010/2011. "Future" = all later years. Existing and Future calculations follow the same methodology, and so moving assets between the Existing & Future tables will not alter the overall charge per area

| Total Cost of Reservoirs per Development Area | Capital Charge per ET - Future | Capital Charge per ET - Existing |
|---|--------------------------------|----------------------------------|
| Service Area                                  | Capital Charge per ET - Future | Capital Charge per ET - Existing |

## Capital Charge: Pipelines - Future and Existing

| Total Cost of Reservoirs per Development Area |                                |                                  |
|---|--------------------------------|----------------------------------|
| Service Area                                  | Capital Charge per ET - Future | Capital Charge per ET - Existing |
| A   | \$ 166.8                       | \$ 5,254.5                       |
| B   | \$ 317.5                       | \$ 1,679.9                       |
| C   | \$ 683.9                       | \$ -                             |
| D   | \$ -                           | \$ -                             |
| E   | \$ 21.2                        | \$ 1,362.2                       |
| F   | \$ 222.7                       | \$ 78.1                          |
| G   | \$ -                           | \$ -                             |

Basis of "Existing" = commissioning year up to 2010/2011. "Future" = all later years. Existing and Future calculations follow the same methodology, and so moving assets between the Existing & Future tables will not alter the overall charge per area.
