

13.6 Notice of Motion - Voucher for Waste Management Centre

---

13.6 Notice of Motion - Voucher for Waste Management Centre

Councillor Cr Meehan

---

I move

That as part of the 2019/2020 Operational Plan and Delivery Program, Council develops a system to provide one free drop off to the Ballina Waste Facility, to each residence, during the rating year. In developing the Operation and Delivery Plan Council will identify a funding source for this service.

The free drop off service will have reasonable limits on weight, volume and the type of materials to be accepted.

**Councillor Comments**

This is something that our community has been crying out for, for a long time. If a plebiscite were held on this matter, we all know what the result would be.

While there will be a cost, it must be remembered that Council funds are the community's funds. As well, Council's waste reserves have in recent times held significant funds.

A majority of LGAs in NSW provide either a system of kerbside pickup or free tip drop off.

In recognition of modern waste management practices and costs, the system should have limits at the lower end for weight and volume. eg 100kg mixed waste, 200kg green waste.

The system needs to enable renter participation, as well as owner occupier.

**Staff Comments**

Council has considered motions similar to this on a number of occasions. The most recent resolution was 27 March 2017 as follows;

1. *That based on the contents of this report Council resolves not to proceed with the introduction of either a bulky waste collection service or free landfill drop off system.*
2. *That Council records the reasons for its decision in point one above including:*
  - *The financial impact to Council is significant and would result in increased waste charges.*
  - *The proposal is inconsistent with Council's objectives for waste recovery and landfill diversion.*
  - *The proposal is inconsistent with the emerging regulatory regime for waste management.*

**13.6 Notice of Motion - Voucher for Waste Management Centre**

---

- *Residents are able to access the landfill on a user pays system and local contractors and other service providers are able to assist residents with collection and haulage of bulky goods.*
- *For the kerbside collection, there are significant risks associated with environmental pollution, scavenging, residential amenity and illegal dumping.*
- *The programs require significant additional resources to establish and implement.*

At that meeting, Council also debated the following motion which was lost.

*That Council receive a report on option two, being the provision of one free tip voucher per residential property per year.*

Attachment 1 is a copy of the report presented to the Finance Committee Meeting held 16 March 2017, which resulted in the above mentioned resolution.

As per that report, at that time the cost estimate was in the range of \$334,075 and \$613,950. The report also sets out the extent of administration required to establish a voucher system that is secure and accessible.

A free tip voucher is free to the customer however there is still the cost to Council. The increased costs would need to be absorbed into the Landfill and Resource Management (LRM) Operations or the Domestic Waste Management (DWM) Operations.

DWM has forecast annual revenues of \$6.9m in 2019/20 and if the cost of the service was charged to that program we would be looking at a 5% (or more) increase in the annual charge to cover that expense.

All DWM customers would then pay this increased charge, even though they may not use the free service.

Participation rates can also vary. The attached report states that Byron Shire Council has an average uptake of 16% and average participation rates are generally less than 50%.

Waste management is a challenging business to operate, vulnerable to legislative and market shocks. Council also needs to consider future risks in respect to the financial position of the business.

For example, Council is about to tender for the reprocessing of recyclables in a market heavily impacted by the introduction of the Container Deposit Scheme and the China National Sword policy. This may result in significant increases in our operating expenses.

The Council landfill site also has significant closure liability costs to be incurred in the future.

Council has also debated the possibility for the waste management operations to be a source of revenue (through a dividend) for essential community services that cannot be funded from General Rates.

**13.6 Notice of Motion - Voucher for Waste Management Centre**

The following table provides a brief summary of the services currently offered by other councils in this region.

<b>Council</b>	<b>System</b>	<b>Details</b>
Ballina	None	N/A
Byron	Tip Voucher	One free drop off service per year. Required to apply for voucher, restricted to either 150 kg of waste or 500 kg of green waste
Clarence Valley	Bulky kerbside collection	Annual collection, entire Shire.
Kyogle	None	N/A
Lismore	Tip Voucher	Three vouchers per year for residents. Two vouchers per year for commercial, approx. one ute/trailer load and restrictions on what can be brought to site. Courtesy trailer provided
Richmond Valley	None	N/A
Tweed	Dial up kerbside collection	Residents can book two pickups per year. Up to two m3 each time.

Our immediate neighbours have been steadily reducing their "free" services to residents. For example Byron Shire no longer provides an annual pick up service and Tweed recently changed their bulky kerbside pick up to an on-call system.

The other side to this discussion is the possible benefits by reducing illegal dumping.

The NSW EPA has an on-going illegal dumping strategy, with that strategy last being updated in September 2017. A copy of the strategy is available as per the following link:

<https://www.epa.nsw.gov.au/publications/illegal dumping/17p0158-epa-illegal-dumping-strategy>

The EPA has, at times, stated that free or subsidised waste services, or targeted vouchers for rural residents, can help to reduce illegal dumping, albeit that this latest strategy is silent on those methods.

Council has worked on illegal dumping campaigns previously with the EPA and rather than providing a free voucher for residents, another approach could be to use available waste funds to implement additional strategies to reduce illegal dumping.

In conclusion it may make political sense to provide a free service however it does impact all ratepayers as the entire community pays for the service through higher fees and charges.

A more holistic approach would be to develop an overall illegal dumping strategy that provides social and environmental benefits for the entire community, with waste funds supporting that strategy.

**13.6 Notice of Motion - Voucher for Waste Management Centre**

---

The strategy could support Council's existing illegal dumping action plan which was originally developed in conjunction with North East Waste (NEW).

This strategy could possibly be implemented without increased waste charges and the strategy may have elements relating to the provision of free vouchers for certain categories of waste generators.

**COUNCILLOR RECOMMENDATION**

That as part of the 2019/2020 Operational Plan and Delivery Program, Council develops a system to provide one free drop off to the Ballina Waste Facility, to each residence, during the rating year. In developing the Operation and Delivery Plan Council will identify a funding source for this service.

The free drop off service will have reasonable limits on weight, volume and the type of materials to be accepted.

1. Report from Finance Committee March 2017 - Kerbside Bulky Waste Collection

13.6 Notice of Motion - Voucher for Waste Management Centre

4.10 Kerbside Bulky Waste Collection - Assessment

4.10 Kerbside Bulky Waste Collection - Assessment

**Delivery Program** Waste Management

**Objective** To provide information on the implementation of a limited bulky waste kerbside collection and/or drop off service.

**Background**

At the 24 November 2016 Ordinary meeting, in response to a notice of motion, Council resolved (in part) as follows:

*Resolution 241116/37*

*That Council receive a report, to be considered during the preparation of the draft 2017/18 Delivery Program, which investigates the implementation and costing of an annual system of (i) kerbside bulky waste pick-up and (ii) free tip drop-off tickets.*

The resolution also called for the report to respond to a model proposed in the notice of motion. A copy of the full text of the resolution is provided in attachment one.

The following report addresses the above resolution.

**Key Issues**

- Providing a user-friendly service for bulky waste
- Minimising collection and administration costs
- Maximising resource recovery and reducing waste disposal to landfill
- Identifying and managing key risks.

**Information**

The purpose of this report is to provide information on the options available to Council to assist residents to dispose of bulky waste. The report examines both options for kerbside collections and options for a tip voucher system for use at the waste management centre.

Overview of Kerbside Collection Programs

- Traditional kerbside clean-up services have included one or more collections of a set quantity of waste per annum
- Waste items are manually loaded into a rear loading truck with compaction to maximise payloads
- Services are provided by area, with residents being provided with advance notice supported by advertising
- Waste collected via kerbside systems cannot be recycled. Some kerbside systems have provided a separate collection for scrap metal to reduce the amount of waste to landfill

13.6 Notice of Motion - Voucher for Waste Management Centre

4.10 Kerbside Bulky Waste Collection - Assessment

- Significant problems have arisen with area based collections, including illegal dumping and the inability to control the volume, timing and type of waste put out
- The main community concerns include the unsightliness of piles of waste being left on the kerb for up to a week, illegal dumping, and the dispersion of waste caused by others rummaging through waste piles
- Kerbside collections in rural areas can be problematic as roads and verges are generally too narrow for safe storage and collection
- Average participation rates in our region are in the order of 50-60%, although typically participation declines over time following the introduction of a service.
- Where ongoing problems have occurred, some councils have phased out Shire wide collections and replaced them with a pre-booked collection service or a voucher system.

Overview of Voucher Systems

- Vouchers are provided that entitle the holder to free or subsidised disposal at a waste management facility
- Vouchers take various forms, including the official rates notice and numbered vouchers
- Voucher systems require robust security features so vouchers cannot be duplicated as there are numerous examples where this has occurred
- Vouchers have generally been issued with rates notices. This creates a significant problem for renters, who have an expectation of being entitled to free or subsidised disposal. Some councils have implemented a system where renters can obtain vouchers on request, however this increases administration and disposal costs
- The cost of administration of voucher systems can be significant due to the need to produce and distribute unique vouchers that cannot be copied, and to ensure that the issuing of vouchers is tightly controlled
- Voucher systems provide a lower level of service than kerbside systems as they are not suited to residents who cannot physically manage bulky items or do not have a suitable vehicle to take the waste to the waste management centre
- Participation rates with voucher systems vary. Byron Shire has an average uptake of 16%. Average participation rates are generally less than 50%
- Numerous Councils have implemented on-line systems to reduce administration costs, improve customer service and control duplication of vouchers.

Proposed Services Arrangements

Council staff have reviewed the information provided as part of resolution 241116/37 and also undertaken a review of a number of existing kerbside and voucher systems across NSW.

Given the considerable problems with illegal dumping and the inability to safely service rural areas, a traditional area based kerbside collection program has not been considered.

Due to administration costs and misuse via duplication of vouchers, a traditional paper based voucher system has not been considered.

13.6 Notice of Motion - Voucher for Waste Management Centre

**4.10 Kerbside Bulky Waste Collection - Assessment**

---

The two service options recommended for consideration include a pre-booked kerbside collection program, and an electronic voucher system.

Only residential properties that receive a garbage collection service will be eligible to utilise the voucher system (currently approximately 16,200 services). This service is not provided for vacant allotment clearing, commercial or trade waste, or general farm clean-ups.

Option 1 Pre-booked Kerbside Bulky Pickup Service

The kerbside bulky waste pickup service is based on the following model:

- The kerbside pickup service is limited to one collection per financial year per residence
- The proposed co-payment is \$40 per collection or \$20 per pensioner collection, to be paid through the Council office
- Once payment is received, a collection day will be arranged with our designated contractor
- Collection quantities will be limited to a maximum of 2 m<sup>3</sup> or 150 kg
- Single items must not exceed 1.8 m in length and must be easily lifted by two persons
- An information sheet will be provided to residents to clarify what will be collected
- Accept household items only such as:
  - furniture
  - small white goods (eg washing machine, dryer, bar fridge)
  - electrical appliances
- A list of items not accepted to be developed, which will include:
  - asbestos
  - builder's waste
  - bulk motor vehicle parts
  - liquid waste
  - green waste
  - household garbage
  - tyres
  - commercial, industrial or farm waste
  - hazardous waste (e.g. chemicals, paints, batteries)
- Any material placed on the kerbside without a co-payment service booking, or placed after the material has been collected will be treated as illegally dumped and appropriate compliance action will be taken.

Option 2 Free tip drop-off voucher

The free tip drop-off voucher is based on the following model:

- Provision of one free tip voucher per residence for the disposal of up to 2 m<sup>3</sup> or 150 kg of permitted waste per financial year
- A unique bar coded voucher will be available per household by applying online. People without internet access or an email address can obtain a waste voucher by visiting the Council office. Provisions will exist to allow tenants to participate in the scheme
- Restrictions will be placed on what materials can be disposed of
  - no liquid or asbestos waste
  - no chemicals

13.6 Notice of Motion - Voucher for Waste Management Centre

**4.10 Kerbside Bulky Waste Collection - Assessment**

- no building materials or
- tyres
- An information sheet will be provided to residents to clarify what is acceptable material, and
- All material brought to the Ballina Waste Management transfer station must be disposed in accordance with waste separation requirements.

Comparison of Pre-booked Kerbside Collection and Voucher Systems

Selection criteria (listed below) have been developed to assist Council in determining its preferred service model for bulky waste.

- Provides assistance for residents that do not have a suitable vehicle to transport bulky waste
- Minimises storage of waste at the kerb reducing illegal dumping and other impacts
- Minimises collection costs per household
- Minimises administration costs
- Maximising resource recovery and reducing waste disposal to landfill
- Minimises financial, environmental and operational risks
- Provides access for both ratepayers and tenants

A comparison of the two collection systems against the key objectives is provided below.

Criteria	Kerbside Collection	Voucher System
Assist residents without a suitable vehicle to transport bulky waste	Convenient kerbside service	Residents are required to transport their waste. Council can provide free trailer hire to assist those without a suitable vehicle
Minimises storage of waste at the kerb	Pre-booked system minimises time at the kerb, however some dumping problems would be expected	Does not require kerbside storage
Minimises collection costs	Council funds collection	No collection costs
Minimises administration costs	Additional costs of managing logistics of pre-booked collections to be borne by Council	An online portal and electronic voucher system would minimise administration costs
Maximising resource recovery and reducing waste disposal to landfill	Very difficult and cost prohibitive to separate waste under the typical contractor model. Majority of waste will require disposal.	Condition of participation in voucher system to keep wastes separate from reusable or recyclable material to reduce disposal costs.
Minimises financial, environmental and operational risks	Some inherent risks with placement of waste on public land. Pre-booked collections mitigates significant risks	Unique barcoded vouchers can prevent duplication of vouchers and control costs. Activities at the waste management centre can be controlled to manage risks.
Provides access for both ratepayers and tenants	The kerbside pickup system would be available to urban service areas only	The proposed voucher program (used by Lismore Council) demonstrates that a workable booking system that provides access for both

13.6 Notice of Motion - Voucher for Waste Management Centre4.10 Kerbside Bulky Waste Collection - Assessment

Criteria	Kerbside Collection	Voucher System
Minimises the resource requirements at the waste management centre	Existing systems are in place for management of bulk loads. Some additional resources will be required for load out of waste for disposal.	ratepayers and renters can be developed Marginal increase in self haul customers however more resource intensive to inspect loads and dispose of more bulky waste.

State and Regional Snapshot

Most Sydney Metropolitan Councils and the surrounding councils such as Wollongong, Central Coast, Blue Mountains and Lithgow provide usually two pre-booked collection services per year.

All bulky waste services had similar constraints on what material was eligible for collection including size and maximum volume.

Neighbouring Council Comparison

The following Table summarises the range of bulky waste collection services provided by neighbouring Councils.

Council	Service provided	Specifics
<b>Byron Shire Council</b>	1 free drop off at the landfill per year (show rates notice)	150 kg of waste or up to 500 kg of garden waste
<b>Clarence Valley Council</b>	1 annual Household Council Collection service	2 m <sup>3</sup> per household. Significant problems controlling the volume and type of waste put out.
<b>Kyogle Council</b>	No service	N/A
<b>Lismore City Council</b>	<ul style="list-style-type: none"> <li>• 3 vouchers per year per household</li> <li>• Courtesy trailer available</li> <li>• Pick up service available for a fee</li> </ul>	Maximum volumes of: <ul style="list-style-type: none"> <li>• 200 kg of mixed general waste (not sortable)</li> <li>• 333 kg of self-sort waste (50% recoverable)</li> <li>• 714 kg of green waste</li> <li>• 1.6 tonne of scrap steel</li> <li>• One gassed whitegood or two un-gassed whitegoods</li> <li>• Five car/4x4 tyres or one truck tyre</li> </ul>
<b>Richmond Valley Council</b>	No service	N/A
<b>Tweed Shire Council</b>	<ul style="list-style-type: none"> <li>• Last kerbside clean up in May 2017</li> <li>• Will be switching to 2 on-call clean-ups per year</li> </ul>	Max 1 m <sup>3</sup> per clean-up

13.6 Notice of Motion - Voucher for Waste Management Centre

4.10 Kerbside Bulky Waste Collection - Assessment

**Legal / Resource / Financial Implications**

Legal Implications

The NSW EPA (2014) *NSW Waste Avoidance and Resource Recovery Strategy, 2014-21* sets out a number of key strategies to reduce waste. Councils and achieve target rates by 2021-22. The key strategies that are relevant to this report include:

- Increase recycling rates for municipal solid waste to 70%
- Increase the waste to be diverted from landfill to 75% and
- Reduce illegal dumping

To achieve the required resource recovery targets set by the NSW Government, some form of waste sorting will be required.

The NSW EPA have outlined a range of proposed reforms that will have significant impacts on all waste streams, especially with the proposed repeal of the proximity principle for transported waste.

Currently, Ballina Shire's waste can be transported lawfully to Queensland as we are located within 150 kilometres of the NSW border. The transported waste levy is charged to all material that enters the landfill (current rate \$78.20/Tonne). A waste levy rebate can be claimed once waste leaves the landfill and is lawfully disposed.

Proposed changes to the Protection of the Environment Operations (Waste) Regulation 2014 (the Waste Regulation) will mean that we will be entitled to claim the transported waste levy only for material being sent to another facility for processing or resource recovery.

If this regulation is passed, Council will need to allocate funds to pay the transported waste levy on the bulky waste, as it would be sent offsite for landfill disposal. This is estimated to be potentially as high as \$190,000 depending on the take of collection service.

Other proposed changes to the Waste Regulations relate to improving landfill performance and the ability to recover or process waste. It may become an offence to send a mixed load from a facility if they can lawfully accept that waste (\$15,000 fines apply). A mixed load could be defined as a mattress and scrap metal such as a washing machine in the same load.

A possible consequence of this requirement may be the need to undertake resource recovery and sorting on this bulky waste and have larger storage areas on site for separate waste streams until load volumes are achieved. Any waste storage area would require adequate bunding and potential leachate collection systems incorporated into the design. While levy costs would be avoided, handling and infrastructure costs will be incurred.

It is the experience of other councils of illegal dumping occurring in the street, often in periods immediately following a collection service. Material stored on the nature strip is the responsibility of Council. Currently dumped or orphan waste is removed by Civil Services staff. Ownership of material must be proved before Council can fine individuals for illegal dumping.

13.6 Notice of Motion - Voucher for Waste Management Centre

4.10 Kerbside Bulky Waste Collection - Assessment

Council compliance staff has suggested that the material is stored within the resident's front yard for collection to avoid risk to the public and to clarify responsibility of waste until it is collected. This will obviate the need for Council Rangers to investigate the matter as an illegal dumping incident. There would be other risks associated with contractors removing waste from within the property.

Resource Implications

It is expected that frontline service staff such as customer service, weighbridge operators, and waste management officers will incur increased customer volumes with the introduction of this bulky waste collection service.

If a bar coded voucher system is adopted, the software and associated hardware (computer and bar code scanner) similar to that used at the Lismore Recycling and Recovery Centre would be required to identify the authenticity of each voucher and prevent multiple visits. Those without internet access can either utilise the computer in the foyer of Council or apply in person with customer service personnel.

Those residents who require a Council kerbside pick-up service will need to pre-book this service. The current model for the pre-booked kerbside pick-up service is based upon residents visiting Council to pay and book this service.

Currently Council cannot administer payments over the phone or online. Establishing an E-service portal will be necessary to enable customers to book and (if required) pay for services online that would significantly reduce the reliance on customer service staff.

A range of information fact sheets will need to be developed outlining the items that will be eligible for collection. Alternative disposal options will be provided for a range of common waste types. This will include education to encourage consumers to be responsible for the whole life cycle of a product by utilising existing services such as the removal of old mattresses or whitegoods for a nominal fee.

Council does not possess the equipment or resources to undertake the bulky waste kerbside pick-up service. Council could purchase a trailer for residents to use in conjunction with their waste voucher to assist with transportation to the landfill.

A kerbside collection service is likely to be undertaken by a sub-contractor. Council will need to determine whether the collection priority is maximising collection efficiencies or maximising sorting/resource recovery capacity.

Contractors who provide this type of service both locally and nationally typically utilise a rear loading truck that undergoes some compaction. No resource recovery work is typically undertaken on this waste stream.

The required collection rates are 50 properties per day, hence a lead time of 4-6 weeks may be required to achieve these operating efficiencies.

13.6 Notice of Motion - Voucher for Waste Management Centre

**4.10 Kerbside Bulky Waste Collection - Assessment**

Financial Implications

The cost to implement the bulky waste collection service has not been included in the 2017/2018 budget to date. The following estimates are provided for Council's consideration.

**Tip voucher – drop off system**

The anticipated annual cost to implement the free tip voucher drop off service for all eligible 16,200 services is outlined as follows:

Item	Cost
<b>Initial set up costs</b>	
Computer software, hardware and training (for vouchers)	\$9,200
Community education, print media	\$25,000
Purchase a trailer (for residents to use)	\$7,000
<b>Sub total</b>	<b>\$41,200</b>
<b>Ongoing annual costs</b>	
Administration processing	\$26,000
Waste fees for handling, transportation and disposal to landfill (based on 2,430 T @ \$225/T)	\$546,000
<b>Sub total</b>	<b>\$572,000</b>
<b>Total</b>	<b>\$613,200</b>

The above cost is based on a voucher utilisation of 100% and assumes the maximum annual volume of waste collected will not exceed 2,430 tonnes (150 kg per 16,200 households).

Assuming a similar participation rate to other Councils (50% utilisation), the cost would be likely to range between \$334,075 and \$613,950 per year.

**Kerbside Pick Up System**

The costs for the drop off system will incur all the charges associated with the voucher system as residents will use their vouchers for free landfill disposal.

Final costs for the pre-book pick up system will depend on the preferred collection methodology for bulky waste. The method outlined is based on a co-payment of \$40/ \$20 pensioner. A contractor pick-up fee has been estimated at \$55 per property. On this basis, Council will incur the cost difference of between \$15 to \$35 per pick-up depending on whether the pick-up is for a pensioner or non-pensioner.

Council would need to fund the short fall of \$247,315 per year (calculated on 2,100 pensioners and 11,621 non pensioner residents eligible for this service in the urban area).

Therefore the indicative cost for pickup and disposal of bulky waste would be expected to range between \$457,990 (50% utilisation) and \$861,765 (100% utilisation) for the pick-up system.

13.6 Notice of Motion - Voucher for Waste Management Centre

**4.10 Kerbside Bulky Waste Collection - Assessment**

---

**Risk**

The kerbside collection service although convenient and preferable to a scheduled area based clean up collection is an expensive service that is likely to benefit a small portion of the Shire.

Once such a system has been introduced, it will be extremely difficult to cease such a service. Council would need to be prepared to make an ongoing commitment to continue to fund this project.

There remains a risk that proposed changes to waste legislation will be introduced that will prevent Council being able to claim the transported waste levy. This will incur an additional \$180,026 cost to this scheme.

Further investigation should be undertaken if this model is to be considered for adoption to resolve ongoing issues such as:

- the potential for problematic waste to enter the environment as a result of poor storage on the kerbside;
- the risk of public injury for pedestrians;
- the inability to service rural areas;
- service delays (potentially 4-6 weeks) in providing this service; and
- the lack of capacity to perform resource recovery under the typical model.

**Consultation**

Internal and external consultation was undertaken during the development of this report.

Council staff consulted with staff at Tweed Shire, Byron Shire, Lismore City and Port Macquarie-Hastings Councils.

Extensive consultation was undertaken with a range of Ballina Shire Council departments in an attempt to identify operational limitations and develop acceptable alternatives.

**Options**

Council has the option to accept or reject the proposal to implement a bulky waste collection service as proposed in the notice of motion. If the Council elects to proceed, Council has the option of a free tip drop off system, a kerbside collection, or both.

There is no doubt many residents make requests for this service and this is reflected by the number of times this has been debated by Council in the past. However, the reality is the service is not free and the costs would result in significant budget impacts as per the details in the above report. Importantly, there is also the concern that the participation rates mean the costs of this service represent a cross subsidy between residents.

While it is accepted that public taxation and rating principles involve cross subsidies to support the overall health and wellbeing of a community, typically these cross subsidies occur where it is not reasonable to apply user pays principles.

13.6 Notice of Motion - Voucher for Waste Management Centre

4.10 Kerbside Bulky Waste Collection - Assessment

The existing arrangements provide pay for use at the landfill, or pay to collect and haul where a resident does not have the capacity to complete such a task. As well as being equitable, the existing arrangements overall represent the most efficient expenditure and least cost to the community for this service.

Council is also reminded this type of service, unless supported by extensive waste sorting and separation processes at the landfill is essentially inconsistent with Council's resource recovery and landfill avoidance programs on the basis a kerbside collection provided by Council without fees and charges does not encourage residents to consider recycling, resale and other waste diversion activities.

Council should also be mindful of the risks noted in this report in relation to the unconfirmed, yet proposed, legislative changes which will have a significant impact on the financial and operational considerations for such a service.

The risks to the environment and neighbourhood amenity from the kerbside service have also been articulated in the report and are the key reasons why a number of councils have sought to terminate their involvement in this type of service.

If the Council is of the mind to implement a scheme, it is noted a trial is not considered a possible option for two reasons. Firstly, the establishment costs for either the voucher system or the kerbside service are significant. Secondly, irrespective of the effectiveness of a service, it is often very difficult for Council to withdraw a service once it is in place on a temporary or permanent basis.

Therefore, if the Council does prefer to proceed, it is suggested that Council establish in principle support only at this point in time and request a further report examining the costs, risks and logistics in more detail. As this is not the recommendation to this report a suggested resolution for this direction would be:

1. *That Council record its in principle support for the introduction of a kerbside bulky waste collection service and/or a free landfill drop off system generally in accordance with the proposals in the attachment to this report.*
2. *That Council defer the implementation of the scheme proposed in point one above until;*
  - a) *Council receives another report assessing in further detail the cost estimates, system and infrastructure establishment requirements, and the operational risks associated with the scheme.*
  - b) *The proposed amendments to the NSW Waste Regulations have been confirmed.*

Having regard to the comments above in respect of the costs and risks associated with this proposal, and based on the availability of an existing alternate, economically and environmentally efficient method for dealing with this community need, the recommendation from staff is not to proceed with either a bulky waste collection service or free landfill drop off system.

13.6 Notice of Motion - Voucher for Waste Management Centre

**4.10 Kerbside Bulky Waste Collection - Assessment**

---

**RECOMMENDATIONS**

1. That based on the contents of this report Council resolves not to proceed with the introduction of either a bulky waste collection service or free landfill drop off system.
2. That Council records the reasons for its decision in point one above including:
  - The financial impact to Council is significant and would result in increased waste charges.
  - The proposal is inconsistent with Council's objectives for waste recovery and landfill diversion.
  - The proposal is inconsistent with the emerging regulatory regime for waste management.
  - Residents are able to access the landfill on a user pays system and local contractors and other service providers are able to assist residents with collection and haulage of bulky goods.
  - For the kerbside collection, there are significant risks associated with environmental pollution, scavenging, residential amenity and illegal dumping.
  - The programs require significant additional resources to establish and implement.

**Attachment(s)**

1. Resolution from 24 November 2016

13.6 Notice of Motion - Voucher for Waste Management Centre

4.10 Kerbside Bulky Waste Collection - Assessment.DOC

241116/37 RESOLVED

(Cr Philip Meenan/Cr Eoin Johnston)

That Council receive a report, to be considered during the preparation of the draft 2017/18 Delivery Program, which investigates the implementation and costing of an annual system of (i) kerbside bulky waste pick-up and (ii) free tip drop-off tickets.

That the report be based upon the following model and any other viable model

**Kerbside bulky waste pick-up.**

- A limited co-payment service available for kerbside collection of bulky waste (2 cubic metres), equivalent to the size of a small trailer.
- Available to each residence once per year.
- Booked through the Council office.
- A cost of \$40 per collection / Aged pensioners \$20. Must be paid the week before the service through the Council office.
- Pick up days each week to be determined. Requests for collection close of 3pm the Friday before.
- Accept household items only such as:
  - o Furniture
  - o small white goods (eg washing machine, dryer, toaster)
  - o electrical appliances
  - o any single item capable of being easily lifted by two persons
- A list of items not accepted to be developed, which may include:
  - o builder's waste
  - o bulk motor vehicle parts
  - o green waste
  - o household garbage
  - o tyres
  - o industrial or farm waste
  - o hazardous waste (e.g. chemicals, paints)

Any waste placed on the kerbside without a co-payment service booking will be treated as illegally dumped and appropriate compliance action to be taken.

The kerbside collection may be provided by Council staff or a contractor.

**Free tip drop-off tickets.**

- Each domestic waste taxpayer to receive one (1) free tip ticket that can be used to drop off items to Council's waste facility (2 cubic metres) equivalent to the size of a small trailer.
- The ticket to be sent out with the annual rates notice.
- Each ticket to have a unique number so multiple copies will not be accepted.
- The drop-off material may be green waste or mixed waste.
- A list of waste not accepted to be developed.
- The waste may have a weight limit (as well as volume).

Further community information and education occur about items that can be dropped off for free at the Council waste facility and the regional waste facility at Lismore.

Further community information and education occur about recycling contractors (eg. metal) that may pick up waste from households.

Cr Ben Smith returned to the meeting at 04:53 pm.

4.10 Kerbside Bulky Waste Collection - Assessment

---

4.10 Kerbside Bulky Waste Collection - Assessment

<b>Delivery Program</b>	Waste Management
<b>Objective</b>	To provide information on the implementation of a limited bulky waste kerbside collection and/or drop off service.

---

**Background**

At the 24 November 2016 Ordinary meeting, in response to a notice of motion, Council resolved (in part) as follows:

*Resolution 241116/37*

*That Council receive a report, to be considered during the preparation of the draft 2017/18 Delivery Program, which investigates the implementation and costing of an annual system of (i) kerbside bulky waste pick-up and (ii) free tip drop-off tickets.*

The resolution also called for the report to respond to a model proposed in the notice of motion. A copy of the full text of the resolution is provided in attachment one.

The following report addresses the above resolution.

**Key Issues**

- Providing a user-friendly service for bulky waste
- Minimising collection and administration costs
- Maximising resource recovery and reducing waste disposal to landfill
- Identifying and managing key risks.

**Information**

The purpose of this report is to provide information on the options available to Council to assist residents to dispose of bulky waste. The report examines both options for kerbside collections and options for a tip voucher system for use at the waste management centre.

Overview of Kerbside Collection Programs

- Traditional kerbside clean-up services have included one or more collections of a set quantity of waste per annum
- Waste items are manually loaded into a rear loading truck with compaction to maximise payloads
- Services are provided by area, with residents being provided with advance notice supported by advertising
- Waste collected via kerbside systems cannot be recycled. Some kerbside systems have provided a separate collection for scrap metal to reduce the amount of waste to landfill

**4.10 Kerbside Bulky Waste Collection - Assessment**

---

- Significant problems have arisen with area based collections, including illegal dumping and the inability to control the volume, timing and type of waste put out
- The main community concerns include the unsightliness of piles of waste being left on the kerb for up to a week, illegal dumping, and the dispersion of waste caused by others rummaging through waste piles
- Kerbside collections in rural areas can be problematic as roads and verges are generally too narrow for safe storage and collection
- Average participation rates in our region are in the order of 50-60%, although typically participation declines over time following the introduction of a service.
- Where ongoing problems have occurred, some councils have phased out Shire wide collections and replaced them with a pre-booked collection service or a voucher system.

Overview of Voucher Systems

- Vouchers are provided that entitle the holder to free or subsidised disposal at a waste management facility
- Vouchers take various forms, including the official rates notice and numbered vouchers
- Voucher systems require robust security features so vouchers cannot be duplicated as there are numerous examples where this has occurred
- Vouchers have generally been issued with rates notices. This creates a significant problem for renters, who have an expectation of being entitled to free or subsidised disposal. Some councils have implemented a system where renters can obtain vouchers on request, however this increases administration and disposal costs
- The cost of administration of voucher systems can be significant due to the need to produce and distribute unique vouchers that cannot be copied, and to ensure that the issuing of vouchers is tightly controlled
- Voucher systems provide a lower level of service than kerbside systems as they are not suited to residents who cannot physically manage bulky items or do not have a suitable vehicle to take the waste to the waste management centre
- Participation rates with voucher systems vary. Byron Shire has an average uptake of 16%. Average participation rates are generally less than 50%
- Numerous Councils have implemented on-line systems to reduce administration costs, improve customer service and control duplication of vouchers.

Proposed Services Arrangements

Council staff have reviewed the information provided as part of resolution 241116/37 and also undertaken a review of a number of existing kerbside and voucher systems across NSW.

Given the considerable problems with illegal dumping and the inability to safely service rural areas, a traditional area based kerbside collection program has not been considered.

Due to administration costs and misuse via duplication of vouchers, a traditional paper based voucher system has not been considered.

### 4.10 Kerbside Bulky Waste Collection - Assessment

The two service options recommended for consideration include a pre-booked kerbside collection program, and an electronic voucher system.

Only residential properties that receive a garbage collection service will be eligible to utilise the voucher system (currently approximately 16,200 services). This service is not provided for vacant allotment clearing, commercial or trade waste, or general farm clean-ups.

#### Option 1      *Pre-booked Kerbside Bulky Pickup Service*

The kerbside bulky waste pickup service is based on the following model:

- The kerbside pickup service is limited to one collection per financial year per residence
- The proposed co-payment is \$40 per collection or \$20 per pensioner collection, to be paid through the Council office
- Once payment is received, a collection day will be arranged with our designated contractor
- Collection quantities will be limited to a maximum of 2 m<sup>3</sup> or 150 kg
- Single items must not exceed 1.8 m in length and must be easily lifted by two persons
- An information sheet will be provided to residents to clarify what will be collected
- Accept household items only such as:
  - furniture
  - small white goods (eg washing machine, dryer, bar fridge)
  - electrical appliances
- A list of items not accepted to be developed, which will include:
  - asbestos
  - builder's waste
  - bulk motor vehicle parts
  - liquid waste
  - green waste
  - household garbage
  - tyres
  - commercial, industrial or farm waste
  - hazardous waste (e.g. chemicals, paints, batteries)
- Any material placed on the kerbside without a co-payment service booking, or placed after the material has been collected will be treated as illegally dumped and appropriate compliance action will be taken.

#### Option 2      *Free tip drop-off voucher*

The free tip drop-off voucher is based on the following model:

- Provision of one free tip voucher per residence for the disposal of up to 2 m<sup>3</sup> or 150 kg of permitted waste per financial year
- A unique bar coded voucher will be available per household by applying online. People without internet access or an email address can obtain a waste voucher by visiting the Council office. Provisions will exist to allow tenants to participate in the scheme
- Restrictions will be placed on what materials can be disposed ie
  - no liquid or asbestos waste

**4.10 Kerbside Bulky Waste Collection - Assessment**

- no chemicals
- no building materials or
- tyres
- An information sheet will be provided to residents to clarify what is acceptable material, and
- All material brought to the Ballina Waste Management transfer station must be disposed in accordance with waste separation requirements.

Comparison of Pre-booked Kerbside Collection and Voucher Systems

Selection criteria (listed below) have been developed to assist Council in determining its preferred service model for bulky waste.

- Provides assistance for residents that do not have a suitable vehicle to transport bulky waste
- Minimises storage of waste at the kerb reducing illegal dumping and other impacts
- Minimises collection costs per household
- Minimises administration costs
- Maximising resource recovery and reducing waste disposal to landfill
- Minimises financial, environmental and operational risks
- Provides access for both ratepayers and tenants

A comparison of the two collection systems against the key objectives is provided below.

<b>Criteria</b>	<b>Kerbside Collection</b>	<b>Voucher System</b>
Assist residents without a suitable vehicle to transport bulky waste	Convenient kerbside service	Residents are required to transport their waste. Council can provide free trailer hire to assist those without a suitable vehicle
Minimises storage of waste at the kerb	Pre-booked system minimises time at the kerb, however some dumping problems would be expected	Does not require kerbside storage
Minimises collection costs	Council funds collection	No collection costs
Minimises administration costs	Additional costs of managing logistics of pre-booked collections to be borne by Council	An online portal and electronic voucher system would minimise administration costs
Maximising resource recovery and reducing waste disposal to landfill	Very difficult and cost prohibitive to separate waste under the typical contractor model. Majority of waste will require disposal.	Condition of participation in voucher system to keep wastes separate from reusable or recyclable material to reduce disposal costs.
Minimises financial, environmental and operational risks	Some inherent risks with placement of waste on public land. Pre-booked collections mitigates significant risks	Unique barcoded vouchers can prevent duplication of vouchers and control costs. Activities at the waste management centre can be controlled to manage risks
Provides access for both ratepayers and tenants	The kerbside pickup system would be available to urban service areas	The proposed voucher program (used by Lismore Council) demonstrates that a

4.10 **Kerbside Bulky Waste Collection - Assessment**

Criteria	Kerbside Collection	Voucher System
	only	workable booking system that provides access for both ratepayers and renters can be developed
Minimises the resource requirements at the waste management centre	Existing systems are in place for management of bulk loads. Some additional resources will be required for load out of waste for disposal	Marginal increase in self haul customers however more resource intensive to inspect loads and dispose of more bulky waste.

State and Regional Snapshot

Most Sydney Metropolitan Councils and the surrounding councils such as Wollongong, Central Coast, Blue Mountains and Lithgow provide usually two pre-booked collection services per year.

All bulky waste services had similar constraints on what material was eligible for collection including size and maximum volume.

Neighbouring Council Comparison

The following Table summarises the range of bulky waste collection services provided by neighbouring Councils.

Council	Service provided	Specifics
<b>Byron Shire Council</b>	1 free drop off at the landfill per year (show rates notice)	150 kg of waste or up to 500 kg of garden waste
<b>Clarence Valley Council</b>	1 annual Household Council Collection service	2 m <sup>3</sup> per household. Significant problems controlling the volume and type of waste put out.
<b>Kyogle Council</b>	No service	N/A
<b>Lismore City Council</b>	<ul style="list-style-type: none"> <li>• 3 vouchers per year per household</li> <li>• Courtesy trailer available</li> <li>• Pick up service available for a fee</li> </ul>	Maximum volumes of: <ul style="list-style-type: none"> <li>• 200 kg of mixed general waste (not sortable)</li> <li>• 333 kg of self-sort waste (50% recoverable)</li> <li>• 714 kg of green waste</li> <li>• 1.6 tonne of scrap steel</li> <li>• One gassed whitegood or two un-gassed whitegoods</li> <li>• Five car/4x4 tyres or one truck tyre</li> </ul>
<b>Richmond Valley Council</b>	No service	N/A
<b>Tweed Shire Council</b>	<ul style="list-style-type: none"> <li>• Last kerbside clean up in May 2017</li> <li>• Will be switching to 2 on-call clean-ups per year</li> </ul>	Max 1 m <sup>3</sup> per clean-up

**4.10 Kerbside Bulky Waste Collection - Assessment**

---

**Legal / Resource / Financial Implications**

Legal Implications

The NSW EPA (2014) *NSW Waste Avoidance and Resource Recovery Strategy, 2014–21* sets out a number of key strategies to reduce waste. Councils and achieve target rates by 2021-22. The key strategies that are relevant to this report include:

- Increase recycling rates for municipal solid waste to 70%
- Increase the waste to be diverted from landfill to 75%; and
- Reduce illegal dumping

To achieve the required resource recovery targets set by the NSW Government, some form of waste sorting will be required.

The NSW EPA have outlined a range of proposed reforms that will have significant impacts on all waste streams, especially with the proposed repeal of the proximity principle for transported waste.

Currently, Ballina Shire's waste can be transported lawfully to Queensland as we are located within 150 kilometres of the NSW border. The transported waste levy is charged to all material that enters the landfill (current rate \$78.20/Tonne). A waste levy rebate can be claimed once waste leaves the landfill and is lawfully disposed.

Proposed changes to the Protection of the Environment Operations (Waste) Regulation 2014 (the Waste Regulation) will mean that we will be entitled to claim the transported waste levy only for material being sent to another facility for processing or resource recovery.

If this regulation is passed, Council will need to allocate funds to pay the transported waste levy on the bulky waste, as it would be sent offsite for landfill disposal. This is estimated to be potentially as high as \$190,000 depending on the take of collection service.

Other proposed changes to the Waste Regulations relate to improving landfill performance and the ability to recovery or process waste. It may become an offence to send a mixed load from a facility if they can lawfully accept that waste (\$15,000 fines apply). A mixed load could be defined as a mattress and scrap metal such as a washing machine in the same load.

A possible consequence of this requirement may be the need to undertake resource recovery and sorting on this bulky waste and have larger storage areas on site for separate waste streams until load volumes are achieved. Any waste storage area would require adequate bunding and potential leachate collection systems incorporated into the design. While levy costs would be avoided, handling and infrastructure costs will be incurred.

It is the experience of other councils of illegal dumping occurring in the street, often in periods immediately following a collection service. Material stored on the nature strip is the responsibility of Council. Currently dumped or orphan waste is removed by Civil Services staff. Ownership of material must be proved before Council can fine individuals for illegal dumping.

**4.10 Kerbside Bulky Waste Collection - Assessment**

---

Council compliance staff has suggested that the material is stored within the resident's front yard for collection to avoid risk to the public and to clarify responsibility of waste until it is collected. This will obviate the need for Council Rangers to investigate the matter as an illegal dumping incident. There would be other risks associated with contractors removing waste from within the property.

Resource Implications

It is expected that frontline service staff such as customer service, weighbridge operators, and waste management officers will incur increased customer volumes with the introduction of this bulky waste collection service.

If a bar coded voucher system is adopted, the software and associated hardware (computer and bar code scanner) similar to that used at the Lismore Recycling and Recovery Centre would be required to identify the authenticity of each voucher and prevent multiple visits. Those without internet access can either utilise the computer in the foyer of Council or apply in person with customer service personnel.

Those residents who require a Council kerbside pick-up service will need to pre-book this service. The current model for the pre-booked kerbside pick-up service is based upon residents visiting Council to pay and book this service.

Currently Council cannot administer payments over the phone or online. Establishing an E-service portal will be necessary to enable customers to book and (if required) pay for services online that would significantly reduce the reliance on customer service staff.

A range of information fact sheets will need to be developed outlining the items that will be eligible for collection. Alternative disposal options will be provided for a range of common waste types. This will include education to encourage consumers to be responsible for the whole life cycle of a product by utilising existing services such as the removal of old mattresses or whitegoods for a nominal fee.

Council does not possess the equipment or resources to undertake the bulky waste kerbside pick-up service. Council could purchase a trailer for residents to use in conjunction with their waste voucher to assist with transportation to the landfill.

A kerbside collection service is likely to be undertaken by a sub-contractor. Council will need to determine whether the collection priority is maximising collection efficiencies or maximising sorting/resource recovery capacity.

Contractors who provide this type of service both locally and nationally typically utilise a rear loading truck that undergoes some compaction. No resource recovery work is typically undertaken on this waste stream.

The required collection rates are 50 properties per day, hence a lead time of 4-6 weeks may be required to achieve these operating efficiencies.

**4.10 Kerbside Bulky Waste Collection - Assessment**

*Financial Implications*

The cost to implement the bulky waste collection service has not been included in the 2017/2018 budget to date. The following estimates are provided for Council's consideration.

**Tip voucher – drop off system**

The anticipated annual cost to implement the free tip voucher drop off service for all eligible 16,200 services is outlined as follows:

Item	Cost
<b>Initial set up costs</b>	
Computer software, hardware and training (for vouchers)	\$9,200
Community education, print media	\$25,000
Purchase a trailer (for residents to use)	\$7,000
<b>Sub total</b>	<b>\$41,200</b>
<b>Ongoing annual costs</b>	
Administration processing	\$26,000
Waste fees for handling, transportation and disposal to landfill (based on 2,430 T @ \$225/T)	\$546,000
<b>Sub total</b>	<b>\$572,000</b>
<b>Total</b>	<b>\$613,200</b>

The above cost is based on a voucher utilisation of 100% and assumes the maximum annual volume of waste collected will not exceed 2,430 tonnes (150 kg per 16,200 households).

Assuming a similar participation rate to other Councils (50% utilisation), the cost would be likely to range between \$334,075 and \$613,950 per year.

**Kerbside Pick Up System**

The costs for the drop off system will incur all the charges associated with the voucher system as residents will use their vouchers for free landfill disposal.

Final costs for the pre-book pick up system will depend on the preferred collection methodology for bulky waste. The method outlined is based on a co-payment of \$40/ \$20 pensioner. A contractor pick-up fee has been estimated at \$55 per property. On this basis, Council will incur the cost difference of between \$15 to \$35 per pick-up depending on whether the pick-up is for a pensioner or non-pensioner.

Council would need to fund the short fall of \$247,815 per year (calculated on 2,100 pensioners and 11,621 non pensioner residents eligible for this service in the urban area).

Therefore the indicative cost for pickup and disposal of bulky waste would be expected to range between \$457,990 (50% utilisation) and \$861,765 (100% utilisation) for the pick-up system.

### 4.10 Kerbside Bulky Waste Collection - Assessment

---

#### **Risk**

The kerbside collection service although convenient and preferable to a scheduled area based clean up collection is an expensive service that is likely to benefit a small portion of the Shire.

Once such a system has been introduced, it will be extremely difficult to cease such a service. Council would need to be prepared to make an ongoing commitment to continue to fund this project.

There remains a risk that proposed changes to waste legislation will be introduced that will prevent Council being able to claim the transported waste levy. This will incur an additional \$190,026 cost to this scheme.

Further investigation should be undertaken if this model is to be considered for adoption to resolve ongoing issues such as:

- the potential for problematic waste to enter the environment as a result of poor storage on the kerbside;
- the risk of public injury for pedestrians;
- the inability to service rural areas;
- service delays (potentially 4-6 weeks) in providing this service; and
- the lack of capacity to perform resource recovery under the typical model.

#### **Consultation**

Internal and external consultation was undertaken during the development of this report.

Council staff consulted with staff at Tweed Shire, Byron Shire, Lismore City and Port Macquarie-Hastings Councils.

Extensive consultation was undertaken with a range of Ballina Shire Council departments in an attempt to identify operational limitations and develop acceptable alternatives.

#### **Options**

Council has the option to accept or reject the proposal to implement a bulky waste collection service as proposed in the notice of motion. If the Council elects to proceed, Council has the option of a free tip drop off system, a kerbside collection, or both.

There is no doubt many residents make requests for this service and this is reflected by the number of times this has been debated by Council in the past. However, the reality is the service is not free and the costs would result in significant budget impacts as per the details in the above report. Importantly, there is also the concern that the participation rates mean the costs of this service represent a cross subsidy between residents.

While it is accepted that public taxation and rating principles involve cross subsidies to support the overall health and wellbeing of a community, typically these cross subsidies occur where it is not reasonable to apply user pays principles.

**4.10 Kerbside Bulky Waste Collection - Assessment**

---

The existing arrangements provide pay for use at the landfill, or pay to collect and haul where a resident does not have the capacity to complete such a task. As well as being equitable, the existing arrangements overall represent the most efficient expenditure and least cost to the community for this service.

Council is also reminded this type of service, unless supported by extensive waste sorting and separation processes at the landfill is essentially inconsistent with Council's resource recovery and landfill avoidance programs on the basis a kerbside collection provided by Council without fees and charges does not encourage residents to consider recycling, resale and other waste diversion activities.

Council should also be mindful of the risks noted in this report in relation to the unconfirmed, yet proposed, legislative changes which will have a significant impact on the financial and operational considerations for such a service.

The risks to the environment and neighbourhood amenity from the kerbside service have also been articulated in the report and are the key reasons why a number of councils have sought to terminate their involvement in this type of service.

If the Council is of the mind to implement a scheme, it is noted a trial is not considered a possible option for two reasons. Firstly, the establishment costs for either the voucher system or the kerbside service are significant. Secondly, irrespective of the effectiveness of a service, it is often very difficult for Council to withdraw a service once it is in place on a temporary or permanent basis.

Therefore, if the Council does prefer to proceed, it is suggested that Council establish in principle support only at this point in time and request a further report examining the costs, risks and logistics in more detail. As this is not the recommendation to this report a suggested resolution for this direction would be;

1. *That Council record its in principle support for the introduction of a kerbside bulky waste collection service and/or a free landfill drop off system generally in accordance with the proposals in the attachment to this report.*
2. *That Council defer the implementation of the scheme proposed in point one above until;*
  - a) *Council receives another report assessing in further detail the cost estimates, system and infrastructure establishment requirements, and the operational risks associated with the scheme.*
  - b) *The proposed amendments to the NSW Waste Regulations have been confirmed.*

Having regard to the comments above in respect of the costs and risks associated with this proposal, and based on the availability of an existing alternate, economically and environmentally efficient method for dealing with this community need, the recommendation from staff is not to proceed with either a bulky waste collection service or free landfill drop off system.

**4.10 Kerbside Bulky Waste Collection - Assessment**

---

**RECOMMENDATIONS**

1. That based on the contents of this report Council resolves not to proceed with the introduction of either a bulky waste collection service or free landfill drop off system.
2. That Council records the reasons for its decision in point one above including:
  - The financial impact to Council is significant and would result in increased waste charges.
  - The proposal is inconsistent with Council's objectives for waste recovery and landfill diversion.
  - The proposal is inconsistent with the emerging regulatory regime for waste management.
  - Residents are able to access the landfill on a user pays system and local contractors and other service providers are able to assist residents with collection and haulage of bulky goods.
  - For the kerbside collection, there are significant risks associated with environmental pollution, scavenging, residential amenity and illegal dumping.
  - The programs require significant additional resources to establish and implement.

**Attachment(s)**

1. Resolution from 24 November 2016

**4.10 Kerbside Bulky Waste Collection - Assessment**

**241116/37 RESOLVED**

(Cr Phillip Meehan/Cr Eoin Johnston)

That Council receive a report, to be considered during the preparation of the draft 2017/18 Delivery Program, which investigates the implementation and costing of an annual system of (i) kerbside bulky waste pick-up and (ii) free tip drop-off tickets.

That the report be based upon the following model and any other viable model

**Kerbside bulky waste pick-up.**

- A limited co-payment service available for kerbside collection of bulky waste (2 cubic metres), equivalent to the size of a small trailer.
- Available to each residence once per year.
- Booked through the Council office.
- A cost of \$40 per collection / Aged pensioners \$20. Must be paid the week before the service through the Council office.
- Pick up days each week to be determined. Requests for a collection close at 3pm the Friday before.
- Accept household items only such as:
  - o Furniture
  - o small white goods (eg washing machine, dryer, bar fridge)
  - o electrical appliances
  - o any single item capable of being easily lifted by two persons
- A list of items not accepted to be developed, which may include:
  - o builder's waste
  - o bulk motor vehicle parts
  - o green waste
  - o household garbage
  - o tyres
  - o industrial or farm waste
  - o hazardous waste (e.g. chemicals, paints)

Any waste placed on the kerbside without a co-payment service booking will be treated as illegally dumped and appropriate compliance action to be taken.

The kerbside collection may be operated by Council staff or a contractor.

**Free tip drop-off tickets.**

- Each domestic waste ratepayer to receive one (1) free tip ticket that can be used to drop off items to Council's waste facility (2 cubic metres) equivalent to the size of a small trailer.
- The ticket to be sent out with the annual rates notice.
- Each ticket to have a unique number so multiple copies will not be accepted. The drop off material may be green waste or mixed waste.
- A list of waste not accepted to be developed.
- The waste may have a weight limit (as well as volume).

Further community information and education occur about items that can be dropped off for free at the Council waste facility and the regional waste facility at Lismore.

Further community information and education occur about recycling contractors (eg. metal) that may pick up waste from households.

Cr Ben Smith returned to the meeting at 04:53 pm.

AGAINST VOTE - Cr David Wright, Cr Jeff Johnson, Cr Sharon Cadwallader and Cr Ben Smith

ABSENT, DID NOT VOTE - Cr Sharon Parry

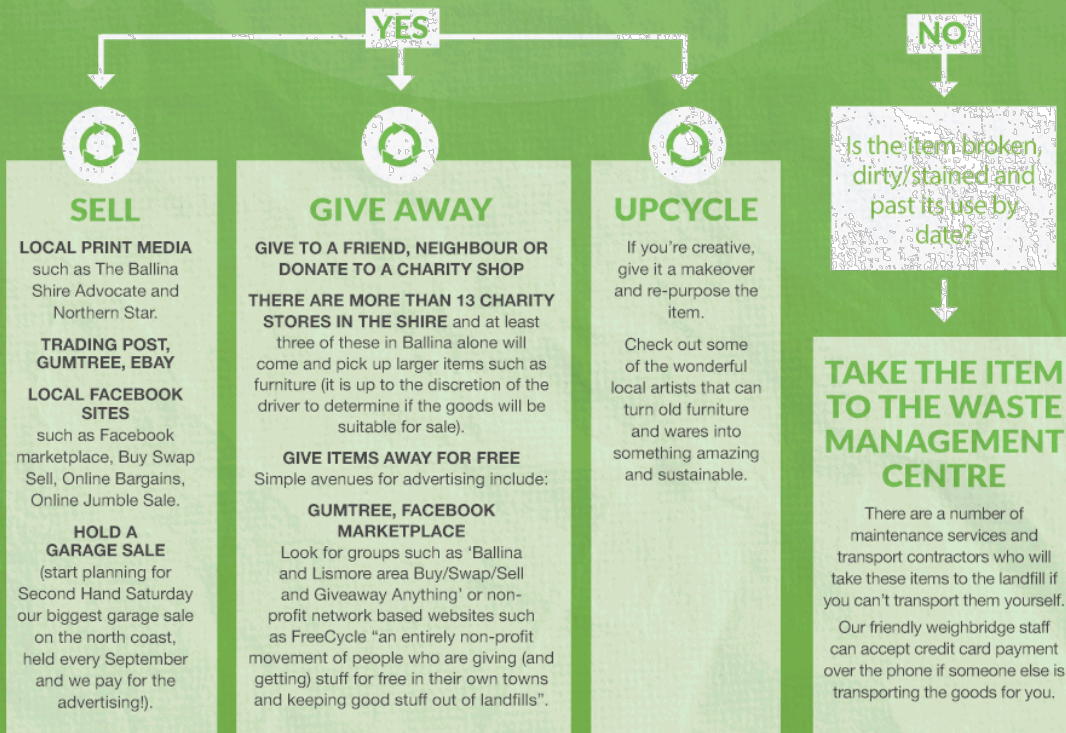

## TIPS FOR GETTING RID OF UNWANTED ITEMS

We are strong advocates for waste avoidance and resource recovery over landfilling materials wherever possible. Many people don't know where to start when they no longer need an item, particularly when the item is large or bulky.

Check out our handy flowchart to support residents to seek the best solution for disposal of unwanted items.

**IS THE ITEM CLEAN, IN GOOD CONDITION AND OPERATIONAL?**  
(a good rule of thumb is: would you give it to a friend?)

## Why doesn't Ballina Shire Council have a resident tip voucher system?

While some residents would like a tip voucher service, we ask ratepayers if they would be prepared to pay for it on an ongoing basis regardless of whether the voucher is used. Let's look at some of the key points to consider.

### WE HAVE TO TRANSPORT ALL WASTE TO OTHER FACILITIES

The Ballina Waste Management Centre does not have an operating landfill, therefore all waste from our council area must be transported and buried at another landfill facility. Our waste centre gate fees are used to pay the compulsory NSW EPA waste levy (\$81.30/tonne of landfill waste received) and the handling, processing, transportation and disposal costs for the waste received.

There are 16,574 households in the Council's current waste collection rates cover the costs to operate our kerbside collection service. We lift and empty 1.9 million kerbside bins a year! If each household was provided with a voucher to dispose of 150 kg of waste annually, up to 2,486 tonnes of waste could be generated. Not including the initial set up cost for items such as a computer software program, hardware and print media, the annual cost to implement a tip drop off voucher service for up to 2,486 tonnes of waste is \$612,720.

The cost of operating and managing a landfill facility is significant. There is no bucket of money that can pay for the cost of managing waste generated under a voucher system.

### WE OPERATE ON A USER PAYS BASIS

Council operates under a user pays system. This means we avoid penalising residents who wouldn't use a tip voucher service in order to subsidise those that would. As well as being equitable, the existing arrangements represent the most efficient expenditure and least cost to the wider community.

### ARE CHEAP GOODS REALLY CHEAP?

Considering the whole lifecycle of a product at the time of purchase is an important step towards sustainability. Cheaper goods often don't last as long as more quality items so the cost and inconvenience of disposal should be considered when purchasing an item.

Stores that specialise in large items such as mattresses and fridges often offer to remove and recycle the old item for a small fee.

### WHY DON'T WE HAVE BULK KERBSIDE COLLECTION?

Introducing kerbside collection would have a significant financial impact and would result in increased waste charges between \$40-\$60 per property, per year. This would not be a user-pay service, all residents would have to pay this annual additional charge regardless of whether they use the service or not.

Kerbside collection is inconsistent with Council's objectives for waste recovery and landfill diversion as very little of this material can be sorted and recycled. It also doesn't encourage residents to consider recycling, resale and other waste diversion activities.

There are also significant risks associated with environmental pollution, public safety, residential amenity and illegal dumping.

### IT'S NEVER BEEN CHEAPER TO BRING SMALL AMOUNTS OF WASTE TO THE LANDFILL

Council reviewed our fees and charges for the 2018/19 financial year and removed the minimum fee charge at the Waste Management Centre. Many customers have been pleasantly surprised by the price to dispose of small volumes of material. It typically costs less than \$25 to dispose of an item such as a lounge or a mattress.

Sorting your waste by stream (for example scrap metal, cardboard and mixed waste in separate piles) will also help to reduce costs.

### ? **Reasons a tip voucher service is requested**

The answer is usually convenience, but some believe that as they pay rates, they are entitled to this service. The reality is a tip voucher service is not "free" and Council would need to generate the income to pay for the transportation and disposal of this material. We would likely have to charge every household approximately \$40 per year to cover the costs of this additional service. Regardless of whether a household uses the service or not. Council's current waste collection rates cover the costs to operate our kerbside collection service. We lift and empty 1.9 million kerbside bins a year!
