

let's get it sorted

Working together to waste less & recycle more

By recycling and composting, we help look after the environment and use the materials we already have.

OUR RECYCLING BINS

Recycling is sorted into all the different recyclable materials and sent to factories that make them into new items. For example, glass can be made into road base and plastics can be made into clothing!

OUR ORGANICS BINS

Food and garden waste is composted in giant rows. The compost is then used by local farmers and gardeners to nourish our soils and grow more food.

OUR LANDFILL BINS

We like to call it 'the bin of last resort' because anything placed inside is buried in a big hole. This means they can't be recycled into something else.

LESS Waste

Avoid waste - reuse and recycle where you can. Here are some handy hints to try today!

✓ Bring a low waste lunch to school with reusable containers

✓ Make art and craft projects with recycled materials

✓ Donate clean clothes and toys you no longer use to a second-hand shop

✓ Use reusable bags

Let's have less going to landfill!

where does it go?

Cut out each of the items provided and sort the recycling, organics and landfill items by pasting them on the correct bin.

HINT: There are a couple of items that belong somewhere else! Which ones?

*items that belong
somewhere else
Think beyond the bin!*

where can it go?
